Hi, I'm **Sven**

Founder of Life Terra!

Ever since my childhood fascination with trees in the Netherlands, I've been on a journey to plant and nurture their growth. From family events to projects with friends, I've seen firsthand how people love planting trees and genuinely care about their impact.

In the face of climate change, I believe in positive action. That's why I envisioned a project where every European can plant his/her own tree. It's not just about 500 million trees; it's a collective story of inspiration, climate awareness and change.

The Climate Threat is now real and we see a lot of citizens of all ages very concerned and wondering if and how this can still be fixed. Many young people are now striking regularly and demanding action by politicians, who often also don't know what to do. Is that it? Do we give up or can we take action?

The recent discovery that 1 trillion trees can fix our planet resonated with me. So, why not start planting together? Life Terra isn't just a number; it's a shared mission. This project was conceived on the above experience and conviction that by organising positive action people will gladly join. We add technology to this project to engage the planters as well as monitor our efforts and allow full transparency.

We have a fantastic team of 16 partners from across Europe with deep expertise, technological skills, media power and most importantly a strong passion to execute this project successfully.

Join us in planting the seeds of change. Let's make a genuine difference together!

PLANTING PARTNERS

UNITING REFORESTATION EFFORTS

At Life Terra, we recognize that true impact is born from the synergy of like-minded individuals and organisations.

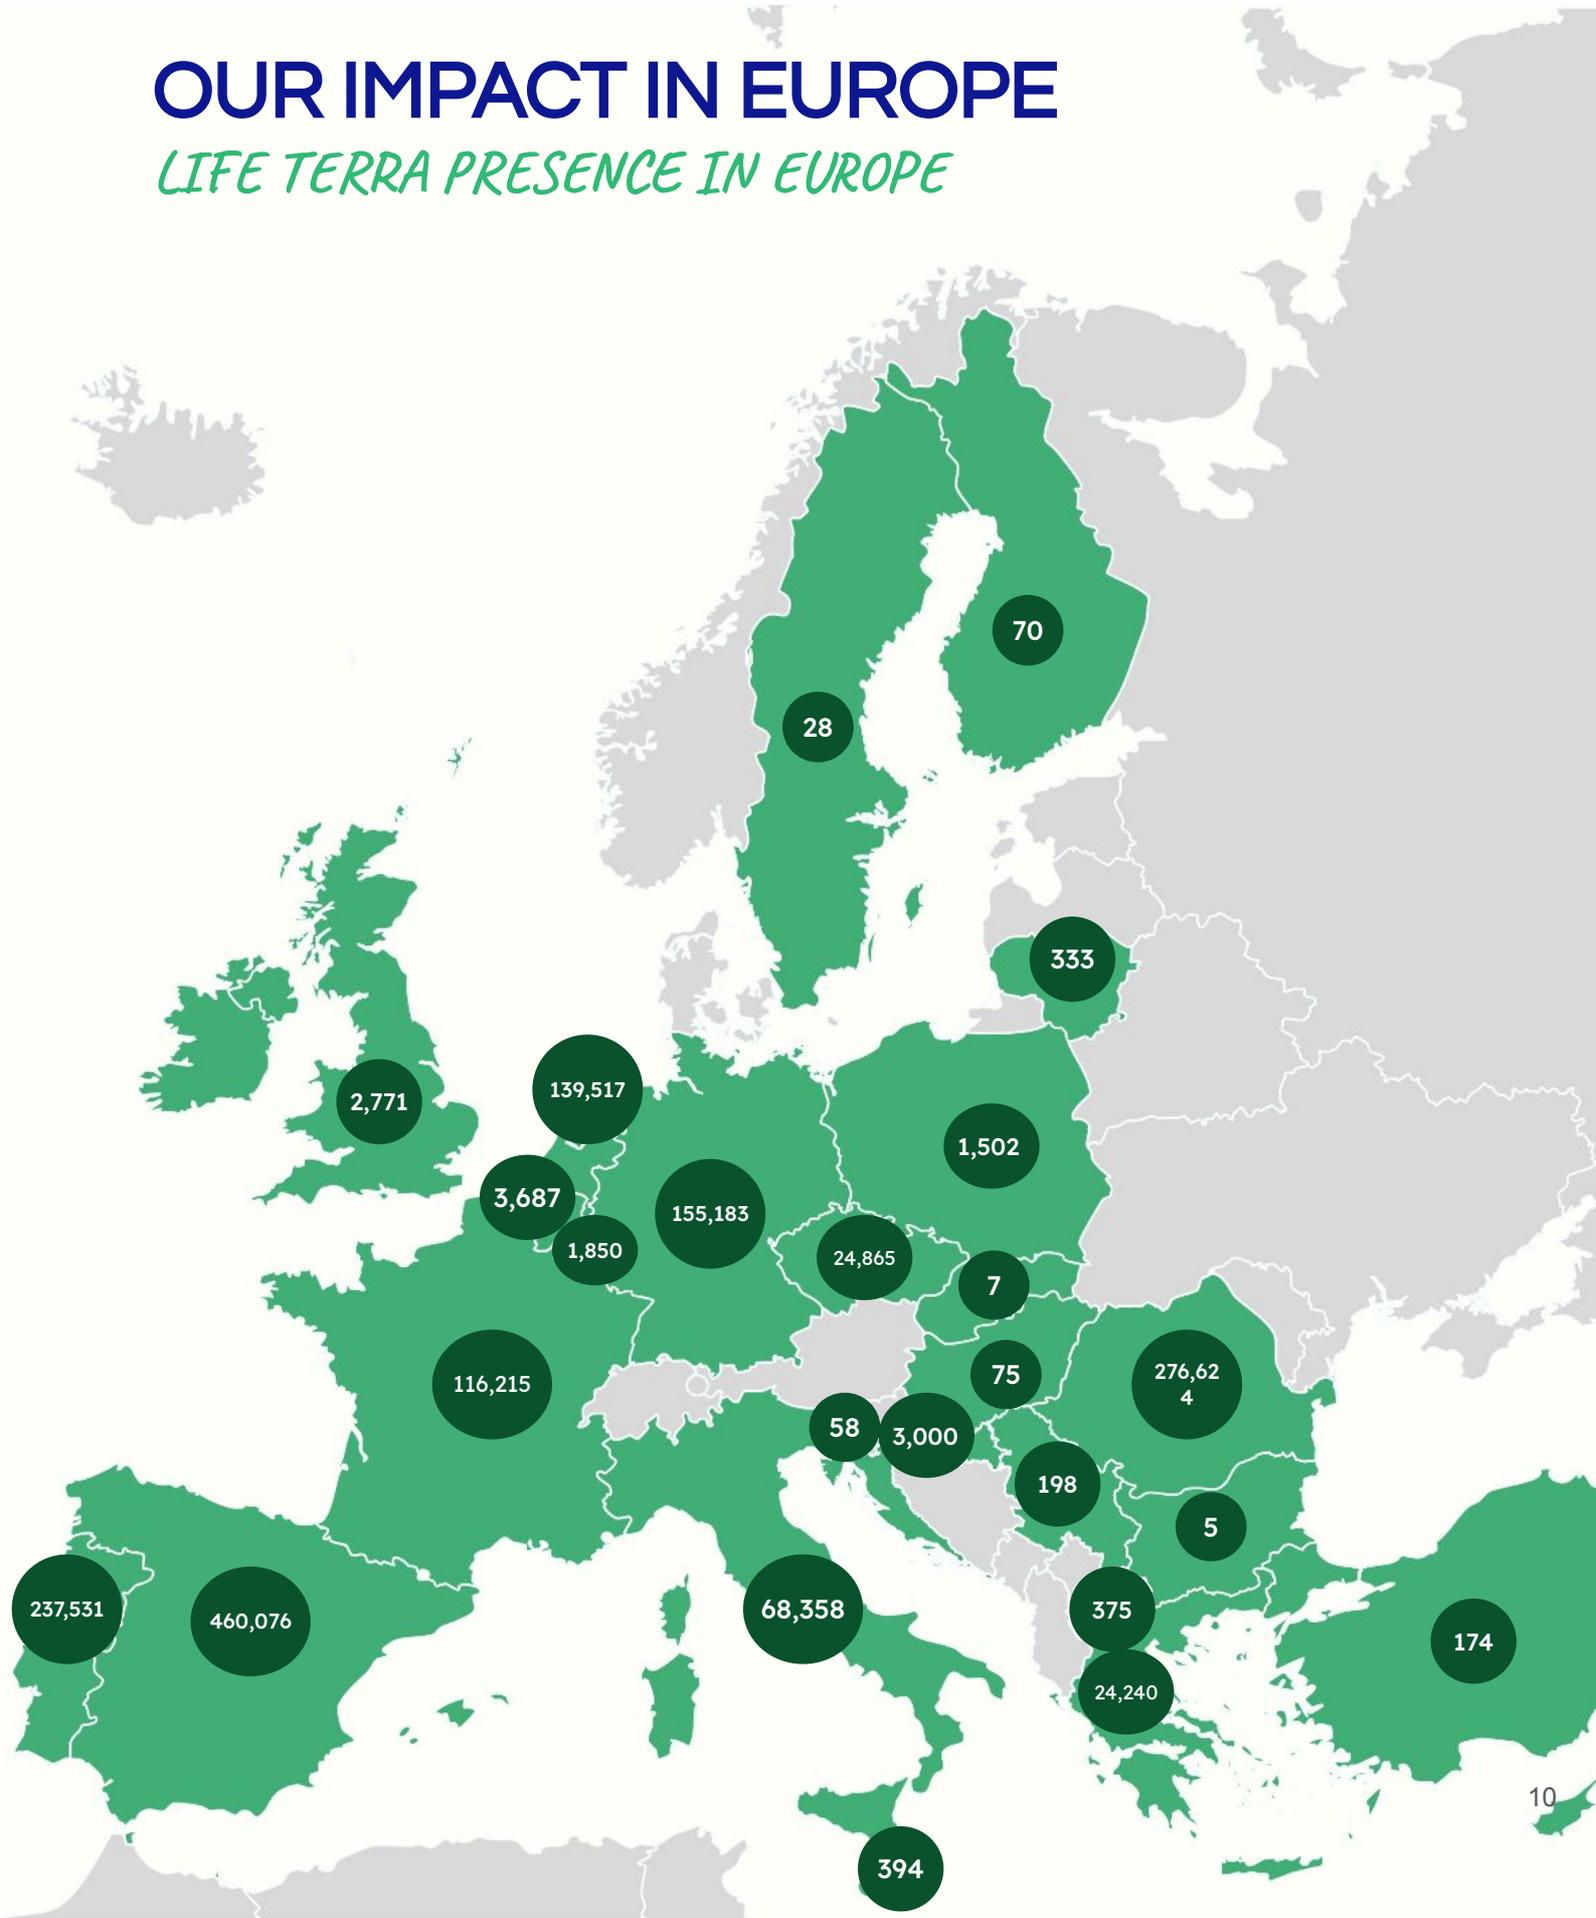

Since 2020, Life Terra has collaborated with many tree-planting initiatives from all around Europe to share knowledge and expertise and showcase our efforts in taking climate action.

Our app to register and geolocalise trees is free to use so we welcome all new initiatives to add trees to our platform. We support our planting partners with trees, planting capacity and monitoring services.

OUR IMPACT IN EUROPE

LIFE TERRA PRESENCE IN EUROPE

BEYOND EUROPE

LIFE TERRA CONTINUES TO EXPAND

We have continued to expand not only across Europe, but also beyond it!

This last season, Life Terra has supported tree planting events in **Brazil, Lesotho, Argentina, Egypt and Armenia** .

We collaborate with local NGOs, schools and tree-planting initiatives and involve local communities to raise awareness on the importance of taking care of the environment.

With the same idea as our planting partners, we have supported these initiatives and NGOs with trees, planting capacity and monitoring services.

We hope to continue making true change, one tree at a time!

FINANCIAL REPORT 2023-24

Balance			
Stichting Life Terra		30/6/24	31/12/22
Assets			
	Non current assets	4.905	6.695
	Receivables	492.937	49.598
	Cash and cash equivalents	12.306	61.923
Total assets		<u>510.148</u>	<u>118.216</u>
Equity & liabilities			
	Equity	-430.378	-464.431
	Current liabilities	940.526	582.647
Total equity & liabilities		<u>510.148</u>	<u>118.216</u>

*Results from January 1st 2023 till June 30th 2024. Due to a statutory change to better reflect the planting season, our fiscal year as of now runs from 1st of July to the 30th of June.

**Figures have been audited by EY Netherlands, in accordance with Dutch law, including the Dutch Standard 4410, 'Compilation engagements'.

***The board has switched to Dutch standards for small nonprofits, effective January 2023. This improves financial clarity. The key change is that unsold planted trees are now valued at zero (not at cost) on the balance sheet. Previously published 2022 figures have been adjusted to reflect this new policy.

EXECUTIVE SUMMARY

CONTEXT

Numerous countries are reporting increases in climate related impacts such as extreme flooding, droughts and forest fires. Climate change has become such an important economic, social and environmental issue that it has been renamed in mainstream discussions as the “climate crisis”.

This crisis demands urgent, large scale action and cooperation between the public and private sectors. However, it has become evident that the crisis is not being properly addressed. The UNFCCC has recently acknowledged that “the pace of current action remains too slow and must be accelerated.”

Europe continues to emit 8,500 tons of CO₂ eq. every minute. Changes in the way we generate energy, move around and eat are necessary to help limit future emissions. Yet, in order to reach a carbon neutral future by 2050, these limiting mechanisms are not enough; we must also capture the carbon emitted. Unfortunately, carbon capture technologies are still extravagantly expensive and energy intensive and at their current stage of development they are unfit for scaling up.

EXECUTIVE SUMMARY

OUR SOLUTION

Nature has already provided us with a cost effective, regenerative climate capture technology: trees. Stichting Life Terra will harness this technology, implementing massive tree planting for nature restoration and conservation. Our first goal will be to facilitate the planting of 500 million trees, effectively capturing 100 million tons of CO2 equivalent*.

OUR APPROACH

Life Terra must distinguish itself from various other tree planting initiatives, take tree planting out of its niche and give it a **new agency**. We think Life Terra boasts many elements of distinction that make it unique – it combines science-based knowledge, innovative monitoring and tracking technology, educating younger generations and the active involvement of citizens across multiple countries.

To achieve this ambitious project, we are proud to work with a consortium of 17 partners from 8 EU countries that will bring expertise, knowledge and network in implementation, technology, education and communication. Our project is approved and supported by the European Commission through their LIFE programme and was awarded €7 mln, which the consortium will use as seed money to put this initiative on the map.

*Average capture over the first 40 years of their lifetime.

THE LIFE TERRA TEAM

We are a diverse group of people coming from different countries, but we all do have one thing in common: our intention to **take impactful climate action** . And this is why we all joined Life Terra.

The foundation is based in Amsterdam and Barcelona.

Meet the team in our [website!](#)

“Alone we can do so little; together we can do so much”

Helen Keller - Rights advocate and activist

A LEGACY THAT MATTERS

WHO WE ARE

Life Terra is a foundation with a mission to **restore our connection with the Earth** and to enable people to take impactful climate action now. We facilitate tree planting, educate future generations, and develop tree monitoring technology. Our Consortium is present in 8 European countries.

We seek to bring people together to plant 500 million new trees for Europe, harnessing and monitoring nature's own carbon capture mechanism and enabling citizens to take urgent action against the climate crisis.

PURPOSE

To create a healthy planet for next generations by empowering citizens and organisations to take effective climate action now

VISION

To be Europe's leading tree planting movement, driven by and for citizens

STRATEGY

Build on our common passion to be a proud and motivated team

Create long term healthy and climate resilient forests

Offer engaging and empowering climate action experiences on a local level

Leverage the power of multi-stakeholder partnerships

Deliver our services through efficient and scalable processes

WHO WE ARE

Plant

A diverse mix of tree species is essential to our planting plan. We believe firmly in “the right tree in the right place”, for more effective land restoration and greater ecosystem resilience.

Monitor

It is important to ensure that the climate & environmental benefits we claim to make are happening. We have developed a state-of-the-art monitoring program to track all trees planted.

Educate

We have created an interactive environmental education programme for students ages 8-14 based on STEM and the best available science, called Terra Mission.

Build

Community involvement is key to our success. If we want to scale tree planting and speed up the pace of climate action, we need to spread the message.

STRONG PACT: Life Terra’s beneficiaries

OUR CORE VALUES

1. TRANSPARENCY

We are creating the tools to make planting initiatives measurable and visible.

2. BIODIVERSITY

All Life Terra plantings will be multispecies, involving an average of 8 different kinds of trees to ensure mixed forest stands and rich, biodiverse ecosystems. Together with the landowner we choose species that are right for the area.

3. THE RIGHT TREE IN THE RIGHT PLACE

We work from an “ecosystem-based approach” meaning that we consider all the conditions of a terrain and its surrounding area to ensure that the lands we are restoring actually need trees.

4. TREES ARE NOT ENOUGH

We love trees, but they alone cannot halt the climate crisis. We believe our governments, companies, and individual households all need to take action, prioritizing sustainable agriculture, the circular economy, green energy, and biodiversity.

OUR CORE VALUES

5. KNOWLEDGE IS POWER

We want a brighter future for our children. We work to educate the next generation so that they can be equipped with the knowledge and tools they need, to make decisions as future leaders, tree caretakers, and stewards of this earth.

6. SUSTAINABILITY

We want our trees to survive and thrive! We only work with landowners that are committed to maintaining their new trees over the long term to take full advantage of their carbon capture potential.

7. GREEN PROCUREMENT

When choosing our own suppliers we look for organizations that have social and environmental goals in addition to their financial ones.

EDUCATION: TERRA MISSION

Life Terra keeps also engaging students, teachers and schools with its educational package, **Terra Mission** .

Terra Mission is Life Terra's sustainability educational package developed by Gynzy. It challenges teachers and students to investigate and learn about the environment, both inside and outside of school. It is now available in 7 languages.

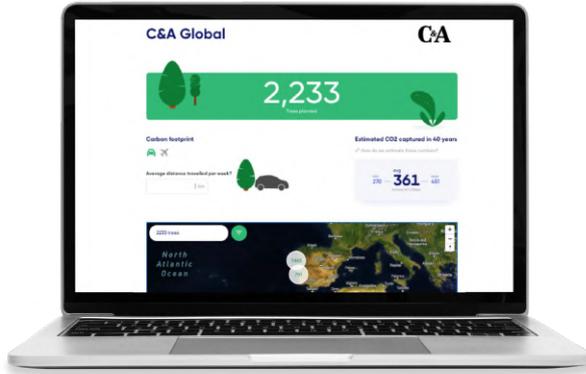

Since the project started, more than **300,000 students and 26,000 teachers** used Terra Mission to learn about the importance of taking climate action, globally and locally.

Also, more than 600 classes have organised tree-planting events with their schools with the help of the [Life Terra Guide for School Plantings](#).

The 2024 STEM Discovery Campaign

Scientix co-organised together with Life Terra, the 2024 STEM Discovery Campaign which has been the largest ever with **46,000 activities in +50 countries** and involving more than 700,000 participants. More results of this campaign [here](#).

TECHNOLOGY & MONITORING

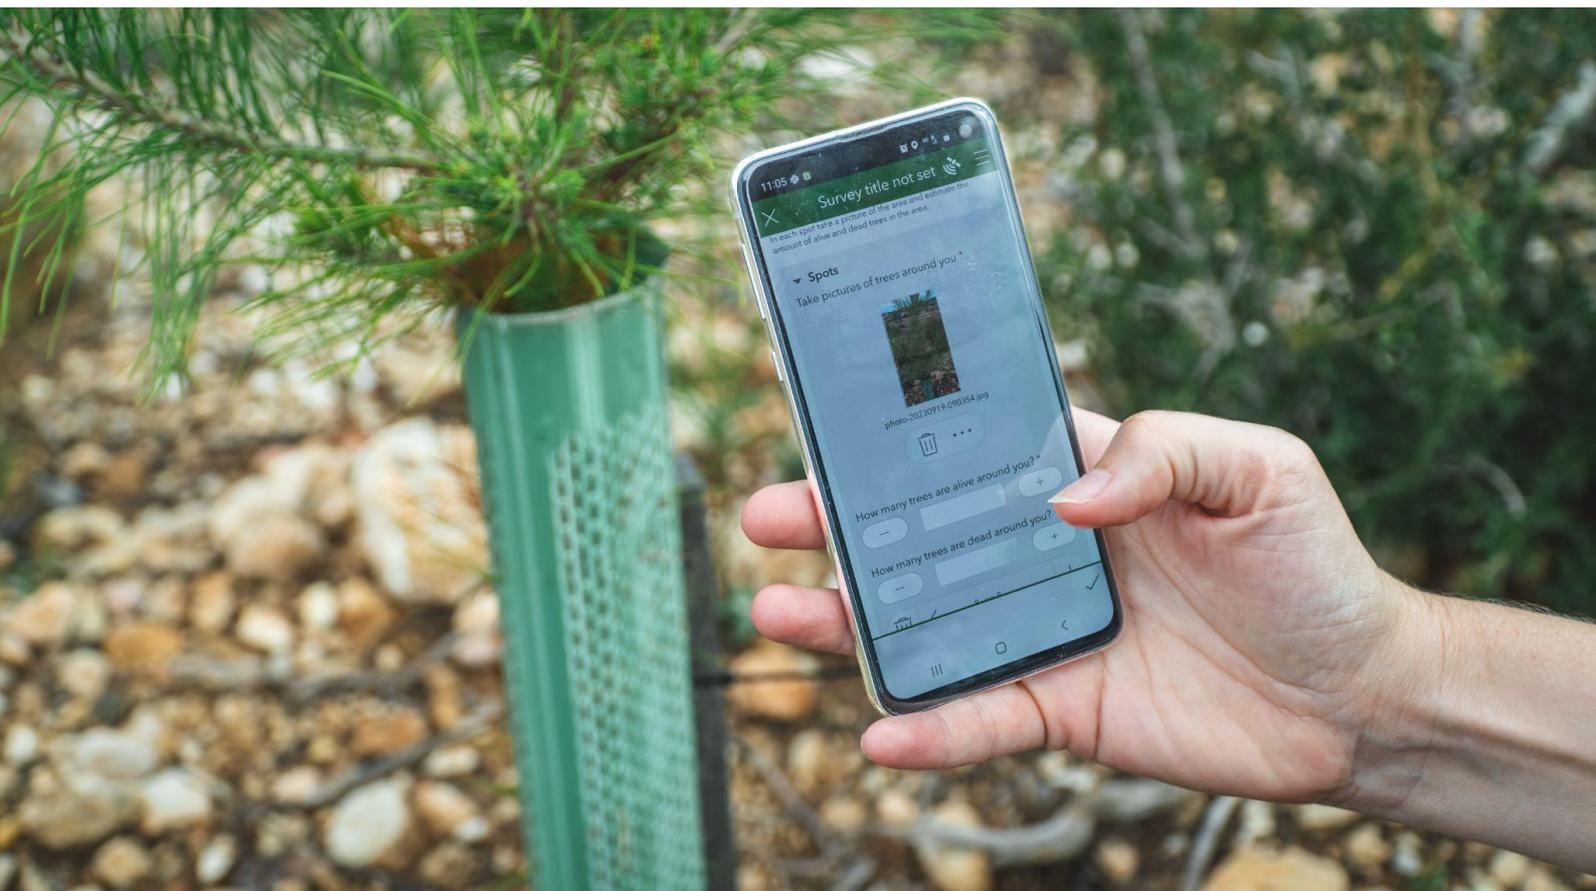

Life Terra's platform allows users to count and monitor the newly planted trees. The aim is to be transparent not only in the number of trees planted during the project but also with the success of these reforestations.

With our platform, citizens and companies can also tag the trees they planted during the Life Terra events.

Once tagged, they can afterwards monitor them and check some relevant information (species, CO2 estimation, and other details) in their own **personal dashboard**. So far, more than **20,000 people** have opened an account with the Life Terra platform to track their planted trees.

Also, companies can have their own **Company dashboard** and showcase their impact. More than **650 organisations** are using now this feature.

All [Life Terra events](#) can be checked in our website, where we track all trees tagged in a particular event, tree species, CO2 estimation and satellite monitoring updates for all plots.

BUSINESS SOLUTIONS

Life Terra offers various solutions for businesses, organisations and individuals that want to take climate action, compensate their carbon footprint or make sustainability concrete and tangible:

CARBON REMOVALS & BIODIVERSITY CREDITS

Life Terra is involved in carbon credits that remove CO2 thanks to our large professional tree-planting projects in more than 20 European countries involving the local community in climate action. [Learn more.](#)

TEAM BUILDING EVENTS

Many companies have joined us in the field to experience climate action firsthand. They planted trees themselves and learn about species, biodiversity and taking care of the environment. [Learn more.](#)

EMPLOYEE TREE GIFT

Life Terra planted trees can be adopted by companies to support reforestation efforts around Europe. Companies can gift them to their employees for Christmas, New Year's or other special occasions. [Learn more.](#)

BUSINESS SOLUTIONS

TREE PLEDGE

Life Terra has developed a digital infrastructure where pledgers can adopt trees and “compete” with one another. A fun way to engage stakeholders into climate action. [Learn more.](#)

LIFE TERRA PLANTING PARTNER

We want to empower other tree-planting initiatives around the world by providing our tree-monitoring technology and helping them to be more transparent and achieve their objectives. [Learn more.](#)

ADOPT TREES

Adopting a tree is the most effective climate change solution available. People can adopt our planted trees via our web app or gift them to their colleagues, friends, or family. [Learn more.](#)

BE PART OF A
UNIQUE A
MOVEMENT
TO **GREEN**
OUR **PLANET**

INSPIRING CASE

6 MILLION TREES PLANTED!

In February 2024, we achieved a remarkable milestone: we reached 6 million trees planted!

With the help of dedicated volunteers, like Tristan, we put in the ground our tree number 6 million in the Green Rebel farm, in Miravet, Catalonia (Spain).

We were extremely proud of this achievement and to be able to share this beautiful moment with Tristan, his family and the people of the Green Rebel farm.

We extend our heartfelt gratitude to all who have contributed to this remarkable journey. From volunteers to partners, your commitment to our planet's well-being is truly inspiring.

While we celebrate this milestone, let's remember that our work is far from over. Let's continue planting seeds of change, nurturing a greener, more sustainable world for generations to come.

Together, we can make a difference, one tree at a time.

INSPIRING CASE

MIYAWAKI FORESTS: the urban micro forests

This allows neighbours to use and enjoy this forest

Together for greener cities

Urban climate resiliency is increasingly becoming a trending topic. Cities will have to adapt to the fast changing climate and weather shocks. To help prevent the Urban Heat Island effect, potential floodings, etc. fast climate action is required to keep cities liveable.

Selective Miyawaki/Micro forests help to create more resilient neighbourhoods by providing green spaces for citizens.

Urban fruit forest in Las Rozas, Madrid

We made a successful start with the first Micro forests for cities. Las Rozas (Madrid, Spain) is actively looking to increase its green spaces with 3 main objectives: increase local biodiversity, fight the Urban Heat Island effect and involve citizens in local climate action. Together with a local foundation for mentally challenged youngsters we planted 2,500 trees and bushes including fruit trees to support a new green space and local food provisioning.

Community Micro forest in Toulouse

In January 2024, Life Terra planted the first Miyawaki forest in the heart of the beautiful city of Toulouse, in the green area of Argoulets, in collaboration with the City Hall of Toulouse, ASES, and ClimatePartner.

This urban mini-forest consists of several thousand trees and shrubs, aligning with the municipality's "100,000 trees" initiative aimed at creating green spaces in the city, by and for its citizens, by 2030.

The local community was invited to actively participate by planting the trees themselves, as part of an initiative that combines climate action and environmental education.

INSPIRING CASE

GANDUM VILLAGE: an eco-village in the South of Portugal

Gandum Village is an eco-village located in Montemor-o-Novo, in the region of Alentejo, south of Portugal.

What Martina and Joao, the founders, wanted to create is not only an eco-hotel where travellers can enjoy a peaceful stay but also a place to honour, connect and live harmoniously with local nature.

Gandum Village offers rooms and housing options, a restaurant that works with local products, a co-working space and a variety of outdoor experiences to enjoy the village's surroundings.

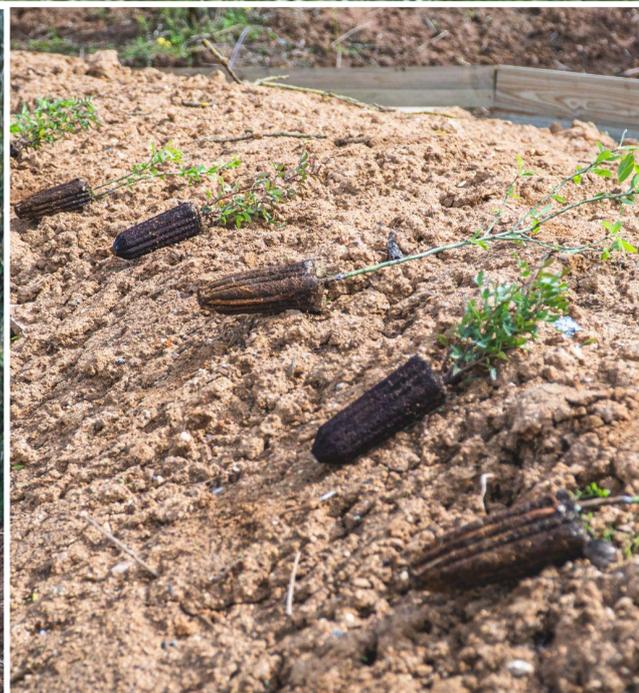

Sustainability is their main driver. They offer their customers sustainable solutions for daily challenges, from the food they produce and eat, to the architecture and energy used in the village. All generating the lowest impact possible.

Gandum Village & Life Terra

Life Terra has helped the eco-village to make the farm's regeneration a reality. We have planted more than 20,000 trees in the farm, putting a strong focus on biodiversity and using more than 80 species to help boost local flora and fauna, attract pollinators and increase soil regeneration.

They use syntropic agriculture where plants are strategically arranged to mimic the structure and functions of a natural forest.

Holistic restoration projects stand as exemplars of sustainable lifestyle and symbiotic coexistence with nature. We certainly believe that Gandum Village is a living example!

INSPIRING CASE

LENTILLÈRES: Restoring a clear-cut damaged area

...to plant 1,000 trees, for and by the supermarket E. Leclerc.

In the heart of Haute Valette, France, a landscape once destroyed by illegal clearcutting now stands as a testament to resilience and restoration.

Through the combined efforts of Life Terra and ASES, as well as the Supermarket E.Leclerc Aubenas, a remarkable transformation has taken place.

With 1,000 new trees and bushes carefully planted, the once desolate landscape now teems with life and vitality.

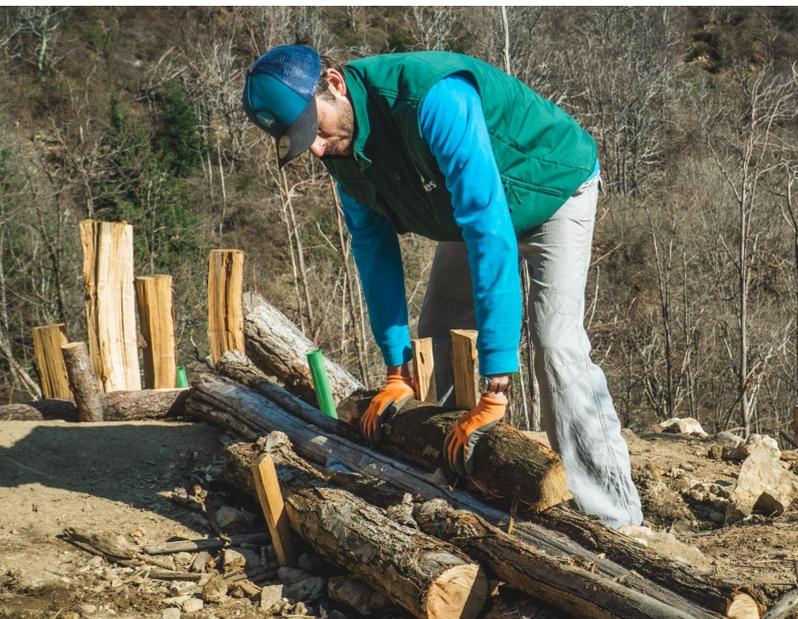

The restoration project

This ambitious initiative was not just about planting trees; it was about revitalizing the soil, fostering biodiversity, and creating a sustainable future for generations to come. By selecting 20 different species, we ensured that the ecosystem would thrive, providing habitats for local fauna and serving as a crucial carbon sink to combat climate change.

We have planted many local and native species to create a mixed ecosystem that will help increase the biodiversity and resilience of the area.

The goal is to green and restore the landscape while creating a safe home for animals and bringing back to life what was once lost.

Our partnership with E.Leclerc and the efforts of our planting partner ASES have been instrumental in realizing this ambitious project.

INSPIRING CASE

ANTWERP: A new food forest for the city

ING Belgium and Life Terra partnered up to plant 300 of the 1,000 trees they have donated near Antwerp, Belgium. These trees were planted in Zoersel to create a biodiverse and fruitful food forest.

The Zoersel food forest contains more than 30 local and native species, mixing trees, fruit trees, flowers and shrubs.

The aim of this food forest is to build a green space that will help to boost biodiversity, attract pollinators and local fauna while also promoting food security.

It will also be a space to strengthen community bonds and raise awareness about the importance of environmental care.

Food forests

A food forest is a diverse, multi-layered agroecosystem designed to mimic the structure and function of a natural forest. It can incorporate a variety of edible plants, trees, fruit trees and shrubs.

The plants are arranged in vertical layers to maximize productivity and biodiversity, while minimizing the need for external inputs like fertilizers and pesticides.

Food forests can provide a diverse array of edible crops throughout the year, creating a sustainable and resilient source of food.

It was amazing to see what can be achieved when passionate individuals and organizations come together with a shared vision for a greener world!

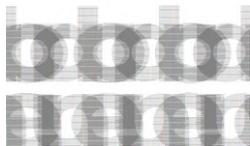

OUR SUPPORTERS

Life Terra collaborates with more than **100 partners** from different fields: business organisations, planting partners, NGOs, tree-planting initiatives and other interested stakeholders.

ClimatePartner

OUR SUPPORTERS

WHAT OUR PARTNERS SAY

„At Kyndryl we are maintaining the critical infrastructure our economy is running on. There was no question that we are supporting the most critical infrastructure our world is depending on: Our forests and trees. Thank you Life Terra for our joint events, planting a tree for each of our employees and all the best for your ongoing work.”

“This was an opportunity for us to take care of one of our own and give back to the environment. We are grateful to Life Terra, for helping us make a positive impact, on team spirit, on solidarity and on the planet.”

During the opening of the Agrifood conference, Life Terra’s founder Sven Kallen was invited to hand over a Certificate for 5 planted trees to **Mr Simonas Gentvilas**, the Minister of Environment of Lithuania. The handover followed a video of the tree planting project close to Vilnius where Lithuanian school kids helped plant 300+ trees the previous day.

LIFE TERRA IN THE PRESS

So far, Life Terra has appeared in **2,325 press mentions** from more than 20 European countries, getting 3,335,970,354 potential press impressions since the beginning of the project.

**LET'S PLANT
TOGETHER**

EUROPEAN TREE PLANTING DAY

Life Terra is proud to launch the European Tree Planting Day, an inspiring initiative with its first edition this coming Autumn. Together with our tree planting partners we are inviting anyone interested in contribution to local climate action. We are calling on municipalities, companies, NGOs, and of course individuals, to join forces in a collective effort to combat climate change through the simple yet powerful act of planting trees.

Envisioned as a festival of nature and sustainability, the European Tree Planting Day will see communities across Europe coming together to plant trees simultaneously. This joyous event aims to raise awareness about climate change, encourage responsibility for our planet's future, and create a lasting impact through communal action.

[More info](#)

[Email us](#)

OUR GOAL

As one of the pillars of our "After Life" activities, European Tree Planting Day is dedicated to scaling up our environmental efforts and drawing more attention to the pressing issues facing our planet.

Participating will make everyone part of a larger movement committed to a greener, healthier world.

Join us in making a difference. Together, let's plant the seeds for a sustainable future.
