70-480 Programming in HTML5 with JavaScript and CSS3
Microsoft

SUMMARY

I'm a web developer, specialized in back end with ASP.NET Core, and front end with Angular
and ReactJS. I've been working with those technologies (C#, JavaScript, TypeScript)
since 4 years ago, also MS SQL and a bit of MongoDB.

Now I have a Microsoft Professional Certification in HTML5, CSS3, and JavaScript.

I love coding, I found in this, something I discovered on me, it seems like I can
contribute a lot with the people who come to work with me, because one of my
skills is being creative. I started as a web designer, just making some of visual coding
and stylesheets, but since I knew about backend and frontend alternatives,
I'm still growing my knowledge about development context.

So far I have experience in custom applications, ecommerce, micro web sites and Rest APIs.
I'm open to grab another kind of knowledge respect to another programming languages,
I am an active English student and kind of a lover of web/mobile development.

EXPERTISE
