FACIL'iti — the innovative tool for digital accessibility

Is your website accessible to users with disabilities as well as to seniors?

Web navigation can be complex and difficult when affected by certain conditions.

Exclusion is a real phenomenon for millions of people.

FACIL'iti is a solution for more comfortable browsing and greater daily well-being, at home, at work or at school.

Create your profile on our dedicated site.

You will then be able to browse according to your own needs on computers, tablets and smartphones.

We can support 11 conditions, including some never before addressed on the Internet — for example Parkinson's disease, dyslexia or color blindness.

More than 150,000 people in France are affected by Parkinson's disease or essential tremor.

How can you click a link when you suffer from these conditions?

FACIL'iti can increase the clickable area of links and modify a site's layout to improve its accessibility.

In France, about 5% of people are dyslexic; children are the most affected.

Understanding a text can prove difficult.

With FACIL'iti, barriers can be identified and the font changed, improving text readability.

With color blindness, color perception is altered.

Not easy to find your way around a site when you cannot distinguish all the colors.

With FACIL'iti, contrasts are adjusted and colors are filtered.

Our user has access to the information.

We worked with several specialist associations.

Their members tested and validated FACIL'iti's features. Here are the test results:

- 75% more comfort reported by this panel of users.

- 91% of them expect public authorities and companies to deploy this solution to finally give them access to the Internet.

Join the FACIL'iti community so your web browsing becomes more accessible.

Create your profile on our site and browse the web comfortably.
