Reflection

As this year comes to an end, it is time to reflect on your journey over the past 12 months. Although you may have had some shortcomings, you deserve to celebrate your beautiful life and achievements. A new year brings new opportunities for growth but true growth only comes after meaningful reflection! I wish you a wonderful and reflective holiday season! -Dr. Sulyman-Scott

Say Goodbye to Your Double-Chin

As we enter the season of renewal, it's a suitable time to explore ways to enhance your natural beauty. If you've been considering getting rid of the double-chin, refining your neck and jawline for a more sculpted look, we would like to discuss two transformative procedures: Kybella and Neck Liposuction.

Choosing between Neck Liposuction and Kybella ultimately depends on personal preferences, desired results, and the level of fat reduction you're aiming for.

Need rapid results? Liposuction may be your answer. Prefer a non-surgical approach with gradual improvement? Kybella might be the ideal choice.

A consultation is the key to determining the most suitable treatment for your unique needs.

Surgical Neck Lipo

Neck Liposuction is a cosmetic surgical procedure. It's effective in removing stubborn pockets of fat that may accumulate beneath the chin and along the jawline. It's tailored to enhance the neck's appearance but also contributes to a more defined and youthful contour of the lower face.

Candidates for neck liposuction are individuals who struggle with stubborn fat in the neck region, often characterized by the presence of a "double chin" or lack of definition along the jawline.

The procedure involves making small incisions in the treatment area and using a suction device to remove excess fat. This procedure can be done in-clinic using local anesthetic.

Enjoy a noticeable reduction in fat right after the procedure as the results are immediate.

Non-Surgical Kybella

Kybella is an FDA-approved injectable treatment that utilizes synthetic deoxycholic acid. When injected into the targeted area, Kybella disrupts the fat cell membrane, causing the fat cells to be destroyed.

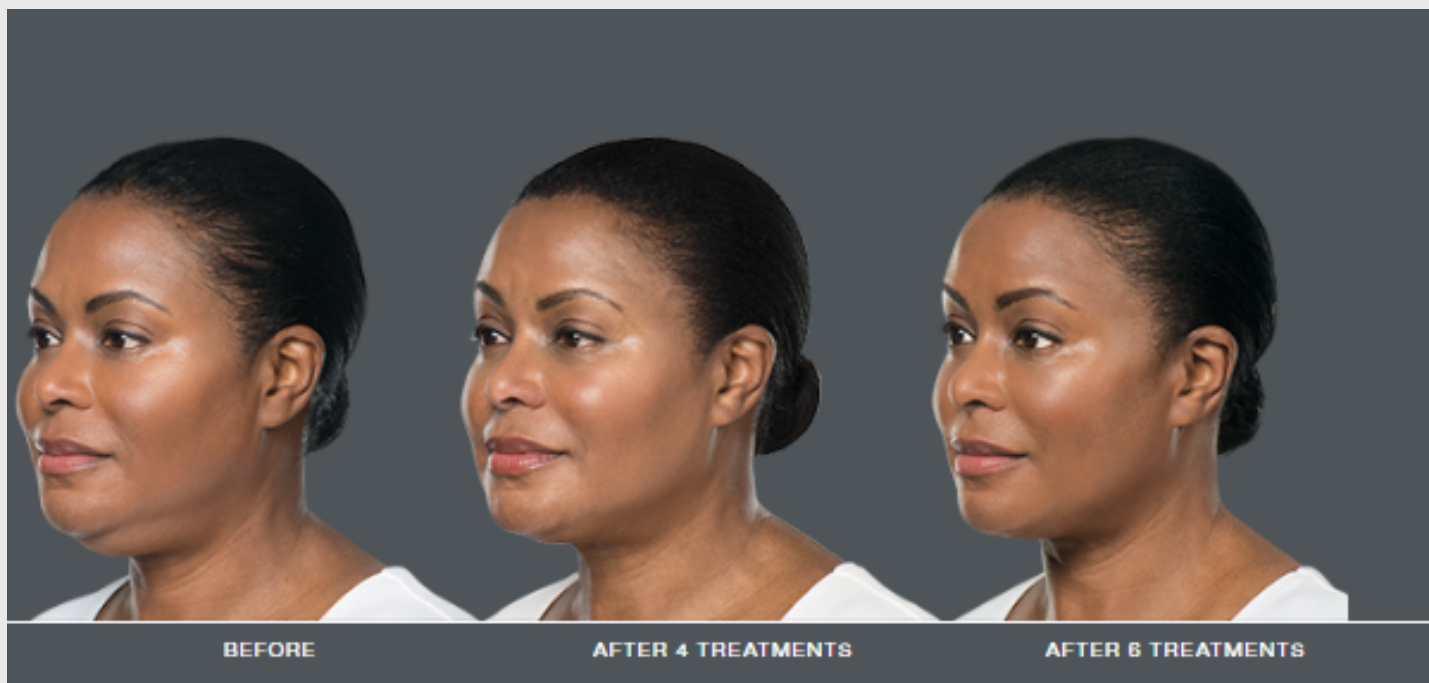

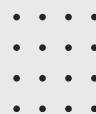

Kybella is designed to address submental fullness, commonly known as a double chin, this injection offers a non-surgical solution to help individuals achieve a more defined and sculpted jawline.

You will see the results of the injections within four to six weeks, as the fatty area beneath your chin slims. For optimal results, you may need a series of injections to achieve your ultimate goal. The number of injections will vary, based on the quantity of fat.

*Don't just take our word for it.
Read what our patients have to say about
That Face.*

For years, I've been unsure about undergoing any aesthetic procedures, but after my consultation with Dr. Sulyman-Scott, I scheduled a series of Vivace microneedling treatments. She was straightforward, only addressed the concerns that I raised, and did not push any additional treatments.

Patient
Feedback

Taylor was so patient and helpful in answering all of my pre- and post-treatment questions.
