Upper and Lower Blepharoplasty (Eyelid Surgery)

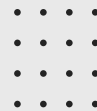

Upper Blepharoplasty: A Refined Lift

Upper blepharoplasty focuses on revitalizing the area above the eyes by removing excess skin and fat that can cause drooping or puffiness. Under the expert care of Dr. Sulyman-Scott, this surgical procedure is performed with precision to ensure results that are both natural and rejuvenating, helping your eyes look more open and refreshed.

Lower Blepharoplasty: A Smoother Look

Lower blepharoplasty targets the area beneath the eyes, addressing concerns such as under-eye bags, dark circles, and loose skin. Dr. Sulyman-Scott's surgical approach carefully removes or repositions fat and tightens the skin, resulting in a smoother, more youthful appearance. This procedure is perfect for those looking to reduce the tired or hollow look that can develop with age.

Non-Surgical Eyelid

For patients who prefer a nonsurgical approach, we offer advanced treatments to refresh both the upper and lower eyelids. Using techniques such as injectables, laser therapy, and skin tightening, Dr. Sulyman-Scott can subtly lift and smooth the eye area without the need for surgery. These treatments are ideal for those seeking minimal downtime and a gentle enhancement of their natural beauty.

Skin Care Spotlight

EYE RENEW COMPLEX

Effectively helps to reduce the appearance of crow's feet and fine lines, tackles puffiness and dark circles, and creates a well-rested and more energized look. With continued use, you'll notice your eyes appearing brighter, firmer, more hydrated, and beautifully revitalized.

Product Feedback: This product is so wonderful. It's feels so lush under my eyes, like a nice drink of water for the bags and crows feet! I love it!
