**Example**

This is another method of displaying numerical data. The leaf is the **FINAL** digit or digits. A leaf is always the last out of 50 digits.

The results are:

|    |    |    |               |    |    |
|----|----|----|---------------|----|----|
| 19 | 48 | 36 | 40            | 34 | 22 |
| 18 | 47 | 18 | 20            | 18 | 36 |
| 49 | 50 | 45 | <del>13</del> | 9  | 17 |
| 22 | 31 | 29 | 26            | 28 | 30 |
| 10 | 8  | 25 | 19            | 46 | 33 |

The stem leaf plot can only handle numbers of 2 digits. For example consider these numbers: 68, 69, 243, 77. There should be a small mark into stem and leaf.

617 64 stem 7 leaf  
24717 2431 stem 7 leaf

**Note**

Refined plot

| stem | leaf          |
|------|---------------|
| 0    | 89            |
| 1    | 3788899       |
| 2    | 0 2 3 6 7 8   |
| 3    | 0 1 1 3 6 6 9 |
| 4    | 0 4 5 6 8 9   |
| 5    | 0             |

7? highest number

the initial plot is a rough sketch of the distribution. This now represents the score 68, 40, 49, 45, 44, 46.

A stem and leaf plot allows the smallest and largest numbers to be seen as well as the size of the distribution. The distribution of data is shown by the number of leaves on each stem.
