

ULTRASHAPE

Dream Spa Medical is pleased to offer the first and only FDA-approved, non-invasive, body-contouring treatment that uses focused pulsed ultrasound to immediately destroy fat-cells, and deliver noticeable results within two weeks.

Using ultrasound energy, UltraShape is able to selectively target fat cells, without heating them or damaging the surrounding tissue. Once the fat cell membranes are disrupted, they are processed and released through the body's natural systems.

The Ultrashape treatment has been designed to help average to moderately overweight men and women achieve an improved body shape and contour. This therapy offers an effective non-surgical alternative to patients seeking a significant reduction in localized fat deposits. Coupled with VelaShape, it is an unbelievable tool for tightening and toning the body.

We recommend three treatments spaced 2-4 weeks apart. Spacing treatments gives your body time to clear the fat cells. This a safe, effective therapy with absolutely no down-time.

PRE-TREATMENT

- Arrive for appointment with clean, dry skin.
- Avoid eating 1-hour prior to your appointment, if treating the abdomen.
- Please inform us if you have:
 - *Hepatitis
 - *Metabolic Disorder
 - *Connective Tissue Disorders
 - *Liver Disease
 - *Immune System Disease

POST-TREATMENT

- Mild to moderate redness can be expected. This typically subsides in 2-24 hours.
- Advil or Motrin can be used for discomfort.
- Bruising is possible. Arnica gel can be used to expedite healing.
- If a blister develops, treat with basic wound care.

PLEASE NOTE

Optimum results are achieved by incorporating these therapies with a healthy lifestyle.
