

SUSTAINABLE DEVELOPMENT Policy

At Orocobre, we produce chemicals that enable the global transition to a clean energy future, whilst socially and economically empowering communities in the regions where we operate.

As a participant in the UN Global Compact, we are taking proactive steps to support the achievement of the Sustainable Development Goals (SDGs) not only through our Shared Value Program, but also through our products and responsible operations.

As part of our contribution to these global goals, we commit to:

	Empower local communities		Reduce water consumption and support community access to clean water		Promote the resilience of local communities and their built environment
	Support local agricultural producers		Provide lithium to support the transition to a low carbon future		Ensure efficient use of natural resources
	Promote the health and wellbeing of our employees and communities		Prioritise local employment and develop and engage local businesses		Support adaptive capacity and resilience to climate-related events
	Promote access to quality education, training and development		Explore opportunities to provide internet and other essential infrastructure		Protect the biodiversity and local ecosystems
	Empower women in our communities and our workforce		Provide new income strategies for our communities		Collaborate with multiple stakeholders to achieve development objectives

** SDG 14 and 16 are not listed as they have no relevance within the context of our activities*

We acknowledge the important role we have to play in promoting the achievement of the SDGs, and we are committed to reporting regularly on our programs and progress.

The policy has been approved by the Executive and Board of Directors.

MARTÍN PÉREZ DE SOLAY
Managing Director & Chief Executive Officer
