

CERAMIC HAND BASIN CARE

Each Lindsey Wherrett ceramic product is made by hand combining time-tested traditional techniques with the benefits of modern equipment and materials. This ensures that, when treated kindly, each piece will have the strength and durability to last a lifetime while also displaying the beautiful qualities of a naturally ageing hand-made product.

Please note the following precautions and care measures to ensure your basin has a long life;

- Clean regularly with warm water and a natural or mild detergent.
- Do not use abrasive cloths or detergents containing abrasive solvents.
- Do not use any strong bleach products or colourants in the basin.
- Care should be taken on installation not to damage the area around the waste outlet as this is thinner than the rest of your basin and therefore less robust.
