## Constant Voltage Phase/120-277V Triac dimmable driver

### Dimming Operation

- The Pulse-Width Modulation (PWM) of output voltage can be adjusted through input terminal of the AC phase line (L) by connection a triac dimmer.
- Usually matching with leading edge/Forward Phase Triac Dimmers (Can customized as a driver only matching trailing edge/reverse phase Triac Dimmers if needed).
- Please try to use dimmers with power at least 2.5 times as the output power of the driver.
- For Forward phase, Magnetic low voltage and Triac Dimmers

### Warning

- Prevent to reverse polarity
- Risk of Fire. Installation Involves special wiring methods to run wiring through a building structure. Consult a qualified electrician
- Risk of Electric Shock. Mount the unit at a height greater than 1 foot from the ground surface.

### Warning

- 1) This driver should be installed by a qualified professional
- 2) Please make sure the transformer is installed with adequate ventilation around it to allow for heat dissipation.
- 3) Ensure that wiring is correct before testing in order to avoid light and power supply damage.
