NETCLEAN **PROACTIVE** CLOUD

A Threat Intelligence Platform for Human Insider Risk

Built on verified, privacy-by-design intelligence, NetClean ProActive Cloud helps organizations identify signals of human insider risk that traditional security tools are not designed to see. Through detection, analysis, and threat feed services, ProActive provides visibility into known high-risk content and indicators across CSAM and TVEC, while integrating seamlessly with existing security environments.

Detect, Analyze, & Respond to Human Insider Risk Signals at Scale

Closing the Gap in Your Cybersecurity Defense

Most corporate security strategies are designed to stop external attackers. Yet some of the most serious risks can originate from within.

NetClean ProActive Cloud adds a human-focused threat intelligence layer to your security operations, helping identify high-risk content and indicators that may otherwise remain invisible. This gives security teams greater visibility into potential human insider risk without relying on behavioral profiling or broad employee surveillance.

Built to Strengthen Your Security Stack, Not Replace It

ProActive Cloud integrates directly into existing security work-flows through APIs, webhooks, connectors, and threat feeds. The result is greater visibility and actionable intelligence without replacing the tools you already use.

Key Values

Verified Intelligence: Powered by indicators validated by law enforcement and trusted intelligence sources—with zero noise.

Privacy-by-Design – Detects only verified high-risk content. No surveillance. No profiling.

Integration-first Architecture – Seamlessly connects with SIEM, SOAR, and existing security work-flows.

Human Insider Risk Focus – Purpose-built to identify signals associated with human insider risk, including known CSAM and TVEC.

Actionable Insights – Provides forensic-grade intelligence to support investigations, compliance, and coordinated response.

Scalable Delivery – Available as detection, analysis, or continuous intelligence feeds — aligned to your operational maturity and needs.

Three Ways to Use ProActive Cloud

THREAT DETECTION

Managed endpoint detection for known high-risk content, deliver-ing high-confidence alerts with minimal operational overhead.

THREAT ANALYSIS

On-demand and API-based analysis of file indicators, bringing verified intelligence into existing security workflows.

THREAT FEED

Continuous machine-readable intelligence on known high-risk domains and URLs, including CSAM and TVEC.

Insider Risk in Numbers

85% of all security breaches involve an insider.

Ref. Verizon 2025 DBIR

64% of all organizations have experienced a CSAM incident.

57% of the same organizations have had repeated cases of CSAM.
