

# T Brown Group Increases Efficiency on Microsoft Azure with Bitnami Solutions

“I was impressed with how smooth the process was. The docs were great, so it was easy to follow the set-up process.” Chris Madden - ICT Manager

When launching Bitnami applications, companies save an average of 160 hours that would have otherwise been spent in packaging the application themselves.

## Challenge

T Brown Group wanted to implement a LAMP solution on Azure as a basis for their website renewal project. They selected a LAMP solution from an ISV from the Azure Marketplace, that didn't work and couldn't be deployed. The T Brown Group quickly found themselves back at the Azure Marketplace to find a solution that was less complex to deploy.

## Solution

T Brown Group found LAMP Certified by Bitnami on the Azure Marketplace, and was able to quickly get the application up and running. Once they had LAMP set up, they launched a few WordPress Certified by Bitnami instances as well to build a new and improved website.

## Result

By using Bitnami applications from the Azure Marketplace, T Brown Group was able to quickly set up a development environment, then deploy applications like WordPress, allowing them to launch a new website infrastructure and landing pages.

Their website is now powered by Bitnami images and runs in production on the Azure Cloud. For ongoing maintenance, T Brown Group is able to update its images easily by launching the latest versions through the Azure Marketplace whenever an update is made.

Bitnami provided T Brown Group with a way to deploy a development environment and new web server without first having to configure and package these on their own. Bitnami also provided peace of mind that Certified by Bitnami applications are always up-to-date and secure.

Use [Bitnami applications on the Azure Marketplace](#) to get started on your project today!

T Brown Group is an established, reputable, award winning building contractor based in the United Kingdom.

With over 46 years experience, the company offers full facilities services for over a quarter of a million properties in conjunction with local councils, housing associations, schools and colleges.
