Unlock innovation and ship faster—without sacrificing security

Today's organizations feel intense pressure to innovate and push boundaries, especially with the advent of Al adoption. Although multi-cloud architectures provide the speed needed for this innovation, they often introduce complexity and security challenges that create friction between developers and security teams.

Multi-cloud architecture: The benefits & challenges

There are cost benefits and improved resilience when companies distribute workloads across multiple clouds, but challenges remain:

Complexity

70%

of organizations struggle with multicloud architecture complexity

Security

9 in 10

developers worry about the security implications of Al coding tools

Cost Management

50%

of organizations said complex cloud pricing is a challenge

You shouldn't have to choose between speed and security.

By integrating security into the software development cycle, Wiz on AWS delivers accelerated innovation, streamlined development processes, and a clear path to Al adoption. Together, Wiz and AWS create a high-powered, robust security solution that supports successful migration, modernizes and protects development pipelines, and automates critical remediation workflows for faster shipping.

With Wiz on AWS, security is no longer a limiter to growth.

AWS + Wiz: Where innovation and security come together

Full-stack visibility, fast: Wiz analyzes all cloud layers across

multiple AWS services, giving a full-stack view of the cloud ecosystem in minutes.

Resolve issues without delays: Get remediation instructions for identified

issues so teams can quickly resolve problems without delaying migration.

Prioritize risk: Wiz Security Graph runs deep risk

assessments that empower teams to quickly identify and target risks.
