

# Cloud Security Assessment

Assess your cloud security posture and understand how to mature your platform engineering capabilities for security.

## Solution Overview

It is critical to ensure your cloud platforms are secure and that their security is maintained. At the same time, you must also consider code security, pipeline security, and how to integrate platform engineering principles into your approach. The AHEAD Cloud Security Assessment will give you both the immediate execution you need as well as a roadmap of core items to tackle to improve your platform engineering capabilities.

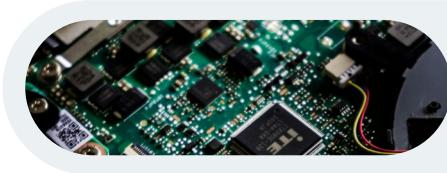

## Why AHEAD for Cloud Security Assessments?

- Security health check powered by Wiz
- Assessment of platform engineering with Wiz
- Understand how you can modernize team processes to maximize value from investments

We will ensure you have a successful proof of value with Wiz and review the results of the assessment with you. We will then extend this to give you clear visibility into the art of possible when combining Wiz with platform engineering methodologies.

## Key Outcomes

- Cloud security health check of current cloud environments
- Cloud security posture review and scorecard
- Vision and roadmap for getting cloud security on track
- Remediation Plan

## Cloud Security Assessment Activities

Work with the AHEAD team for onboarding

Run Wiz Cloud Security POV

Present current state & recommended future state

AHEAD team reviews your current platform engineering approach

Identify critical issues

Plan for remediation & roadmap for adoption

## Work with AHEAD

Schedule a briefing and demo to see the art of what's possible and start your assessment.
