

Secure Cloud: Complete

powered by **WIZ***

Uncover Segmentation, Data, Application and API Risks in the Cloud

Three angles of analysis, one unified vision.

WWT is the first to offer a Secure Cloud: Complete Accelerator, combining our three most popular assessments into a single, unified solution. We will analyze your environment for network segmentation, data security and cloud workload issues using best-of-breed tools and normalize the results using the Wiz security graph .

Three different areas of expertise within WWT will analyze the findings and come together with our cloud security experts to create a unified vision on how to address automation, CI/CD, ownership, CCoE, network, data, app, and API risks.

Bespoke results from dedicated experts

Modern cloud environments are a complex web of cloud-native and third-party tools with numerous integrations and data sources. A complete analysis of your cloud environment requires a **security** team with deep expertise in each area, as well as the cloud security expertise to tie it all together.

Our experts will choose industry leading tools that fit your needs, based years of cyber security experience, to provide a customized, tangible path to maintain compliance and achieve cloud ROI.

Benefits of a 21-day complete assessment

Agentless Onboarding

Sensitive Data Discovery

Visibility Into Resource Traffic and APIs

Identify Unknown Applications,
Data Stores and Network Paths

Vulnerability Insights

Risk Prioritization

Actionable Recommendations

Path Towards Continuous Compliance

Maximizing ROI

How WWT Can Help

WWT's Secure Cloud: Complete Accelerator is the only tailored solution providing a unified path forward from an analysis of three assessments, from three tools, contextualized by **Wiz** and analyzed by three subject matter experts. We provide the understanding needed to protect your cloud workloads, data, and the networks it traverses without the complexity, cost or operational overhead that typically prevents achieving cloud ROI.

Secure Cloud: Complete utilizes dedicated resources from three teams within the Cloud Security Practice to drive excellence and success through

Data Security

Your dedicated data security expert will highlight data protection issues and prioritize the appropriate actions needed to establish a strong data posture by using tools to:

- Identify Stale Data
- Find Ghost Data to ensure Compliance
- Mitigate Copy Data
- Uncover unknown data stores
- Discover improperly and untagged data

Network Segmentation

WWT is a top partner of the leading network OEMs and brings industry leading expertise to bear when analyzing your run-time cloud networking design for:

- Various interactive networking services commonly used by attackers
- Workloads that are ideal pivot points when moving laterally
- Unexpected dependencies
- Unknown connectivity between workloads

Cloud Security

WWT offers expertise as a top partner for leading CSPs, ISVs, and OEMs. We are well versed in prioritizing cloud risk and designing comprehensive solutions that enable the business:

- Addressing foundational alignment issues
- Program governance
- Continuous compliance programs
- Operationalizing remediation into DevSecOps
- Moving security to the front, past shifting left

Tailor-made Solutions

WWT's industry expertise and partnerships allow us to bring the right tools for your unique situation. Your secure outcome will include:

- Agentless solutions that support your platform
- Structured and unstructured data discovery across IaaS, PaaS and SaaS data stores
- A mapping of resources and flows, with context, to improve understanding of the environment
- Rationalization of cloud security tool capabilities

A Secure Cloud is Within Reach

Wherever you are on your cloud journey, WWT Secure Cloud: Complete will accelerate your next phase.

Let us, in 21 days, provide the data to focus your organization's cloud initiatives and empower your team to prioritize what truly matters in the cloud.
