

# SALZMANAGER

THE MOST ADVANCED MANAGEMENT PLATFORM  
FOR DE-ICING SALT AND SALINE SOLUTIONS

## INTELLIGENT, FLEXIBLE, SECURE – THE SMART SOLUTION FOR SALT MANAGEMENT

-  **Inventory monitoring:** real-time tracking of all operations
-  **Detailed statistics:** analysis of stock levels and withdrawals
-  **Centralized warehouse management:** different storage sites on one system
-  **Flexible user management:** personalized access rights for optimal control
-  **Individual consumption reporting:** authentication enables precise allocation
-  **Seamless integration:** link to ERP and third-party systems via standardized interfaces

SALZMANAGER IS OPTIMIZED FOR ALL DEVICES (PC, LAPTOP, SMARTPHONE, TABLET)

## SALZMANAGER

**T**he SalzManager is a web-based platform for recording and managing de-icing material inventories during winter operations, and related processes. Thanks to our years of experience working with public works authorities and our in-house software development, we are able to offer flexible custom solutions – from the management of individual sites to the administration of entire regions. The SalzManager package is currently available in the following languages: German, Italian, and French.

**W**hen connected to our on-site automation systems, the SalzManager provides a fast and accurate overview of warehouse stock and all operations such as drawdowns and refills. The system also delivers comprehensive statistics and historical analyses. Flexible user management enables easy control of access to salt and brine storage facilities using RFID chips, which simplifies third-party billing and allows for

detailed analysis of salt consumption per vehicle/route. Using standard interfaces, the system is able to integrate level monitoring using equipment from third-party manufacturers and ERP systems.

**C**entralized warehouse management provides essential information for logistical planning and accounting, thereby improving the efficiency of administrative processes. Working with the salt supplier, orders can be placed with just a single click – or automatically via the system. New salt consignments can be instantly confirmed via a QR code.
