## FLEET FUEL MANAGEMENT

Fuel is one of the top expenses of any fleet. In addition to the cost of oil, fraud at the pump is on the rise. Nonfuel purchases are a growing concern, as well as the threat of card skimmers. Implementing a managed fuel program with the right fuel card can mitigate fraud and optimize fuel use.

### Safe and simple fuel management.

By implementing fuel card services, you can reduce the risk of fraud, control costs, and provide your drivers with a convenient method of payment.

The process is simple. When drivers pull up to the pump, they swipe their vehicle's fuel card, enter their personal identification number and then record their current mileage. Instead of receipts for each transaction, you will receive a consolidated invoice, allowing you to manage more efficiently one of your fleet's top expenses. Access to an online portal allows you to easily review purchases and manage drivers.

Our fuel card services not only help to protect your finances by mitigating fraud, but also find ways to save you money on your fuel expenses. You may also be eligible to enjoy perks, such as discounts at the pump, when your drivers utilize their fuel card.

### Control spending.

Unlike corporate cards and expense reports, our fuel card program provides the transparency you need to eliminate unwanted expenses. Use our online tools and reports to track every transaction and mitigate the risk of fraud or eliminate premium fuel and nonfuel purchases by setting up card usage restrictions.

### Reduce administrative tasks.

Say goodbye to expense reports! Our fuel program comes with efficient online tools that streamline the administration of your fuel expenses. Update cards, driver information, and more—all online.

### Optimize fuel use.

Our program provides insight into vehicle health and driver habits through data points, such as odometer readings, fuel spend, fill-up times, and driver stats. By understanding such key components of vehicle analytics, you can make the best decisions for your fleet.
