MIKE ALBERT

FLEET TOLL MANAGEMENT

Routes with tollways can increase the cost of operating a fleet if vehicles aren't optimized for electronic tolling. Fleet toll management programs streamline the driver's experience, simplify administrative tasks, and reduce toll expenses up to fifty percent.

Proactive toll management.

Manage tolls on all of your vehicles through one easy system. Mike Albert's electronic toll payment solution provides your fleet with centralized controls, reporting, and payment processing.

How it works.

Your fleet vehicles' plates are enrolled with participating toll authorities via our tolling network and provider. Upon enrollment, drivers receive welcome kits with letters, transponder windshield mounting instructions, and toll program equipment for vehicles. Once the equipment is installed, drivers may begin using electronic tolls on any cashless tollway where PlatePass coverage is available. Then, pay all toll expenses on one consolidated bill.

Increase productivity.

Allow your drivers to utilize the high-speed cashless toll lane, reducing travel time. Optimize routes with insight gained from toll data through automated reporting.

Reduce violation risks.

Automated fulfillment eliminates most, if not all, toll violations and penalties due to toll authority errors you might otherwise miss.

Streamline administration.

Consolidate your toll accounts into one centralized program. Eliminate individual toll expense reporting and monitoring.
