

ALBERTIQ™ VEHICLE & DRIVER MONITORING

Maximize control over your fleet's safety, productivity, and TCO with Albert IQ™, our industry-leading vehicle and driver monitoring solution. Using your choice of connectivity options—directly from embedded OEM telematics or an aftermarket device—Albert IQ captures and analyzes the most vital data on vehicle use, driver behavior, and maintenance needs and merges it with all your fleet information on one, streamlined management platform.

Track vehicle utilization.

Albert IQ helps you mitigate unauthorized use of your fleet vehicles. It acquires data on when, where, and how long each vehicle is driven and reports when a trip is outside of business hours or when the distance, total trip time, or number of stops or trips in a day exceeds the defined limit.

Track driver behavior.

Albert IQ provides driver scoring to help you ensure the safety of your drivers, their passengers, and individuals in your drivers' paths. It compiles data on how each vehicle is operated and sends a report for seat belt use, speeding, harsh acceleration, braking, or cornering.

Track vehicle health.

If you choose to use telematics from your vehicles' OEM or your preferred aftermarket provider, Albert IQ will connect to it seamlessly and give you instant access to near real-time data on the oil life, tire pressure, fuel level, and total mileage for each of your vehicles. It will also notify you of any factory recalls.

For more in-depth fleet health monitoring—which unlocks the power of predictive maintenance to prevent major repairs and breakdowns—pair Albert IQ with devices from our partner Geotab, a leader in telematics innovation. With this option, diagnostic trouble codes are collected and interpreted; data is provided on multiple systems relating to the engine, the battery, oil, tires, fuel, coolant, transmission fluid, and filters; and all scheduled and predictive maintenance is prioritized for you in order of importance.

All your fleet data on one management portal.

Once Albert IQ gathers data from your vehicles, it pulls it into Overdrive™—our proprietary fleet management client portal—where it's organized with all your other fleet information and displayed on a comprehensive single pane of glass.

Overdrive's intuitive interface with quick-view dashboards, advanced reporting, and user-friendly navigation makes it effortless to find the exact data you need—right when you need it—on vehicle health, maintenance, utilization, orders, contracts, and registrations; driver behavior and vehicle assignments; billing and online payments; vetted service center locations; and more.

Albert IQ and Overdrive work together to put you in control of your fleet operations anywhere, anytime, more efficiently.
