Midi Desktop Display Stand

How to Assemble a Midi Desk Top Display Stand with Plastic Frame.

• Remove the Display Stand from the packaging.

• Place onto a suitable surface such as a table or desk.

• Connect the header panel by using a piece of the U shape connector on either side of the header panel. This connector should overlap the base of the header panel and the top of the assembled panels.

• The Display Stand should be arranged into an open "U" shape to ensure stability.

• Display material can be attached using Velcro Hook tabs (recommended).

• Please note that due to the nature of the panel core, drawing pins are not recommended for continuous/changing use.
