

8 Panel Display Stand

How to assemble the 8 Panel Display Stand with plastic frame

- Remove the top and base panels from the cardboard box.
- Open out the base panels with the protruding sliders at the top of the panels and place into a “W” shape.
- Position the sliders towards each outer corner of the panels.
- Lift the top set of panels onto the base panels.
- Press each panel down firmly ensuring that the top panels snap into the sliders positioned in the base panels. (An audible click will be heard). This maybe a little tough the first couple of times you assemble.
- Make sure that the top panels snap into the sliders positioned in the base panels.
- Connect the header panels by using a piece of the U shape connector on either side of the header panels. The connectors should overlap the base of the header panel and the top of the assembled panels.

• Please ensure that panels are built at an angle for stability.

• Attach pictures, graphics, etc. using Velcro hook tabs (recommended).

• Please note that due to the nature of the panel core, drawing pins are not recommended for continuous/ changing use.

To Dismantle this Display Stand

• Remove the header panels.

• Concertina the display stand together.

• Fold the top panels forward until they unclip.

• Place both sets of panels and the header panels back into the cardboard box.
