CaSO_4

calcium sulfate hemihydrate

- Osteoconductive and inhibits non-osteogenic cells
- Promotes wound healing
- Easy to set-up, easy to handle and easy to place
- Combines well with ACE bone grafting particulate
- Includes Regular Set Liquid

CaSO₄ CALCIUM SULFATE HEMIHYDRATE

CaSO₄ is one of the first bone materials ever used in a grafting procedure and maintains a safety record dating back more than 100 years. CaSO₄ is considered one of the clinician's first choices among synthetic bone grafting materials. Calcium Sulfate is sterile, highly purified and continues its bioactivity through the entire healing process. CaSO₄ is totally resorbed at the completion of the healing period.

Features

- Osteoconductive
- Inhibits non-osteogenic cells
- Promotes wound healing
- Completely resorbable
- Easy to set-up
- Easy to handle
- Easy to place
- Cost effective
- Combines well with ACE bone grafting particulate

CaSO₄ is recommended for

- Periodontal defects
- Extraction sites
- Socket preservation
- Sinus augmentation
