

ACE SOUTHERN

A HENRY SCHEIN® BRAND

BECAUSE BONE REPAIR ISN'T ALWAYS A QUICK FIX

Longer Resorption for Sustained Bone Repair.

resorbable collagen membrane

- Fully resorbable with a resorption time of up to 6 months¹
- Easy to handle, trim to fit, and place (either side up or down)
- Guides healing and regeneration of bone and surrounding tissue
- Unique fiber orientation provides high tensile strength for *in situ* stability of membrane
- Cell occlusive, designed to retard and/or prevent epithelium down growth

¹ Reference on back

RCM⁶ RESORBABLE COLLAGEN MEMBRANE

RCM⁶ Resorbable Collagen Membrane allows you to guide healing and regeneration of bone and surrounding tissue within your time frame. RCM⁶ is intended to aid in the wound healing process within oral surgical procedures, such as: dental implants, bone defects, periodontal defects and ridge augmentations. When used in conjunction with a bone grafting particulate, RCM⁶ can help mitigate the migration of the particulate from the surgical site. RCM⁶ is packaged sterile, non-pyrogenic, and for single use. Its resorbability eliminates the need for surgical removal.

Features

- White, non-friable membrane matrix engineered from highly purified Type I Collagen
- Fully resorbable with a resorption time of up to 6 months ¹
- Guides healing and regeneration of bone and surrounding tissue
- Unique fiber orientation provides high tensile strength for *in situ* stability of membrane
- Cell occlusive, designed to retard and/or prevent epithelium down growth

Advantages

- Long resorption time, for sustained function in bone repair
- High mechanical strength for membrane stabilization
- Each piece can be easily trimmed during surgery for a final fit
- May be placed with either side against the tissue or bone

Typical Uses

- Ridge augmentation
- Bone regeneration around implants
- Sinus lift
- Periodontal defects
- Apical root resection
- Extraction sites

Resorption Comparison *

* Approximate in vivo resorption time.
