

Value Algo Trader Power

The intraday power market is highly volatile, characterised by ever-increasing turnover, and is steadily becoming faster and more complex. With Value Algo Trader Power, you can unleash your earnings potential by automating your continuous spot power trading.

At Volue, we've been dedicated to revolutionising continuous spot trading since 2014. Our mission is to empower market participants to achieve unprecedented levels of automation and reliability in their trading endeavors. With Volue Algo Trader Power, you can transcend the limitations of conventional trading and explore new dimensions of profitability.

Key Benefits:

01

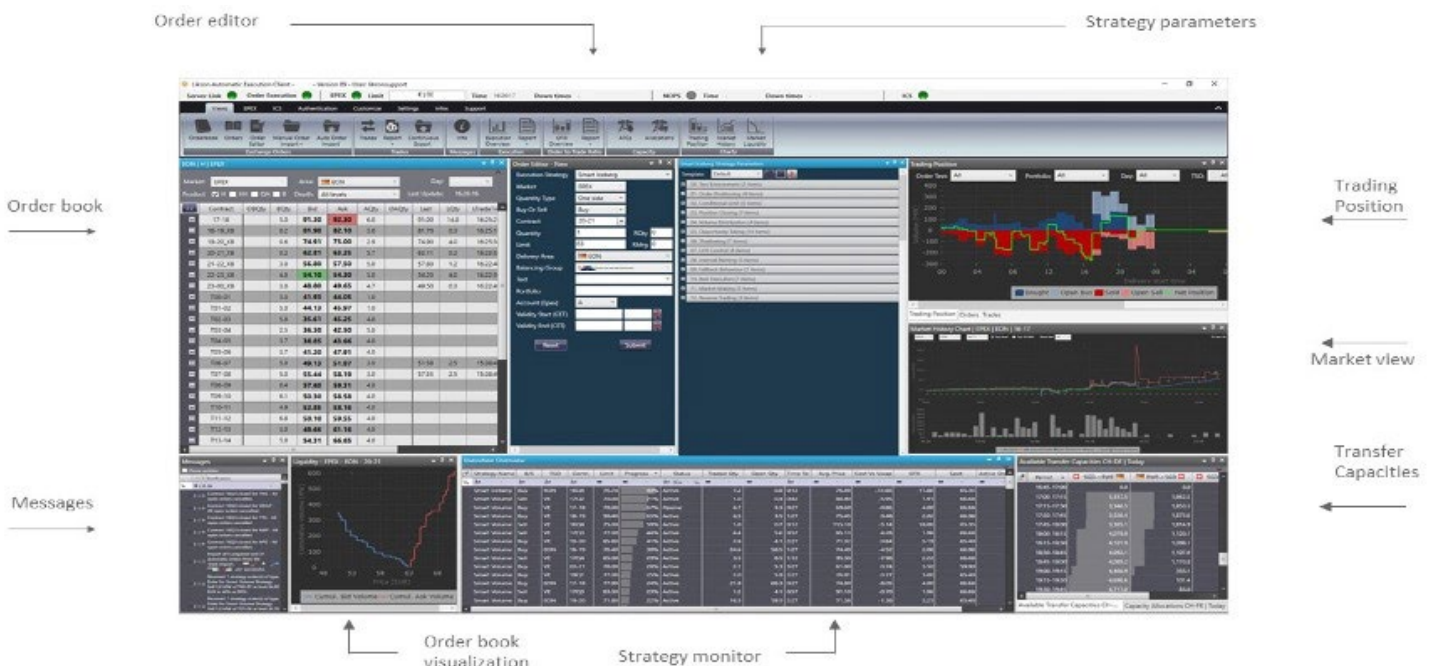

Plug and trade

Robust and sophisticated trading algorithms are part of the solutions. No need to develop own algorithms. With a detailed configuration you are able to design a unique trading algo that expresses your trading preferences with respect to aggressive or passive execution in the market. With default configurations you are able to make P&L from day one. We offer Algos to market friendly position closing (of e.g. renewables), to trade flexible generation capacities an for proprietary trading strategies.

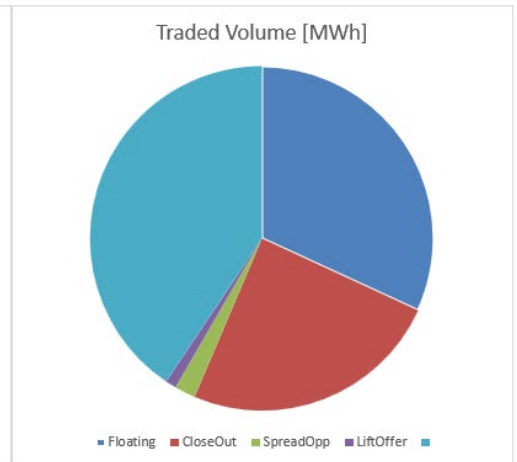

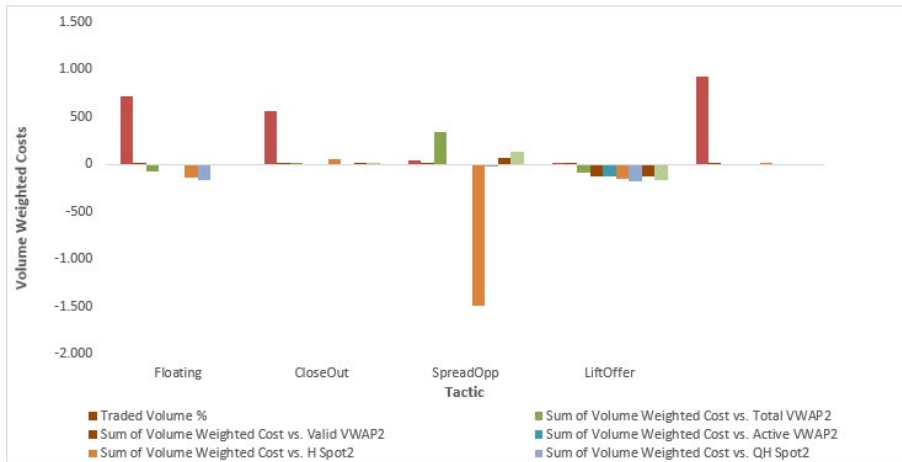

02

Fully Automate your 24/7 Intraday Operations

The system runs 24/7 in the cloud as SaaS and will be maintained with 24/7 on call support. Optimized workflows and interfaces with up- and downstream systems and/or existing own developments, tight integration with asset optimization systems.

Delivered as SaaS

As a full SaaS service, the functional and technical development, maintenance and operation are essential components of our offering. Future updates and further developments are always included with your subscription, including backend API's (M7/Nord Pool), new regulations, limitations, commercial product and algorithmic improvements to the strategies.

Special features

Performance Monitoring

On-the-fly calculation of relevant benchmark prices and performance tracking. Next to market standards a Spot, ID3, ID1 we calculate custom VWAP-prices to compare your trading performance with relevant benchmarks. Performance results can be linked back to Algo-Configurations so that a trader can get comprehensive feedback to optimize the use of the Execution Algos.

API integration

Connect your surrounding tradings systems via RestAPI. Build your own trading algorithms in addition to the out of the box execution strategies.

Internal Order Matching

Buy and Sell orders in the same contract can be internally matched. We offer sophisticated pricing mechanisms for various use cases.

User Management

Various user roles exist to steer the level of access for different user groups.

Trading Limit Control

Make use of an advanced trading limit setup to set precise boundaries to the algo's trading activity.

ICS Swiss Cross Border Trading

Automated cross border capacity booking and market optimization.

EPEX/NordPool Redundancy

Connectivity to both Exchanges. Automatic re-routing of orders in case of a downtime.

Backtesting Framework

With the help of the customer success team you can simulate different algo configurations based on historical market data.
