Building and Siting Guidelines

Denman Prospect

Building and Siting Guidelines

Welcome to Denman Prospect

Welcome to Denman Prospect, a place where we work with home owners and builders to create Canberra's most remarkable suburb.

The aim of the Denman Prospect Building & Siting Guidelines is to assist in creating a coherent vision for our community.

The Guidelines have been designed to ensure all homes at Denman Prospect are built to a high standard and encourage a variety of built forms and examples of architecture.

The natural topography of Denman Prospect lends itself to interesting designs that respond well to the natural attributes of the site.

The requirements set out in these Guidelines will assist in providing you with peace of mind. We are committed to helping your investment grow into the future and protecting you from inappropriate development within the estate.

Denman Prospect offers access to everything Canberra, and the surrounding region, has to offer. We are proud to be delivering this remarkable suburb.

How to use the Guidelines

To ensure compliance with all the principles, objectives and requirements set out in the Denman Prospect Building & Siting Guidelines (the Guidelines), all building designs must be approved and endorsed by the Design Coordinator. This includes external colour and material selections as well as landscaping plans.

In consideration of these designs, the Design Coordinator may exercise their discretion to waive or vary a requirement where they deem it to be allowable or beneficial to the development.

Plans will be assessed against the Guidelines that are applicable at the time of plan submission. All decisions regarding the Guidelines are at the discretion of the Design Coordinator.

The Guidelines comprise of the following key sections:

Façade Design	8
Dwelling Siting & Design	10
Dwelling Services & Ancillary Items	13
Roofs & Solar Requirement	15
External Colours & Finishes	18
Landscaping	22
Sustainability	26

Under each section is a range of design elements that should be considered when designing your home, as well as *Objectives* and most importantly, developer *Requirements*.

Objectives indicate 'what is to be achieved', while **Requirements** provide specific direction that must comply to meet the objectives.

Process to Approval

The following steps illustrate the process for each purchaser in order to construct a dwelling in Denman Prospect:

Step 1 Review the Guidelines

Homes must be designed in accordance with the Guidelines. If you have any queries, preliminary advice may be sought from the Design Coordinator to ensure that concept designs will meet the requirements of the Guidelines.

Step 2 Submission

Designs are to be submitted for approval through the customer portal which can be accessed from the Denman Prospect website (www.denmanprospect.com.au). The online application includes a Design Approval Application Checklist.

Step 3 Approval

The Design Coordinator will promptly review and approve plans that comply with the Guidelines. Complete and compliant applications will be processed within 5-10 working days. Incomplete or non-compliant applications will need to be re-submitted as required.

Step 4 Re-Submission

Plans that do not include all required information or that do not comply with the Guidelines will be returned via email with feedback and the areas of non-compliance highlighted.

Once your plans have been stamped and approved any amendments made to your plans and specifications prior to or during the construction of your dwelling must be re-submitted to the Design Coordinator for endorsement.

Step 5 Building Certification and/or ACTPLA Approval

All plans must satisfy the Territory Plan and applicable code requirements for building and development in the ACT. Once your plans have been granted Developer Approval they will need to be submitted to the relevant authorities to be certified.

Step 6 Certificate of Occupancy

You cannot live on your Block until your dwelling is complete, a Certificate of Occupancy has been issued and all relevant approvals have been obtained.

Step 7 Practical Completion

Return of Compliance Bond & Landscaping Contribution

Once the Developer determines Practical Completion has been achieved, the online application for return of the Compliance Bond and payment of the Landscaping Contribution can be completed.

Practical Completion means:

- 1 The construction of the dwelling is complete and all aspects comply with the plans and specifications endorsed by the Developer.

- 2 Any damage to nature strips or public domain prior to or during construction has been rectified.

- 3 All landscaping, including reinstatement of the verge, has been completed.

- 4 All boundary fencing, return fencing, side gates and retaining walls have been constructed to the satisfaction of the Developer and as per the endorsed plans.

More information regarding the application process for the return of the Compliance Bond and payment of the Landscaping Contribution can be found on our website:
www.denmanprospect.com.au

It is important to engage with the Design Coordinator early to ensure your journey to endorsement as Compliant is streamlined. Your plans and specifications will be endorsed as Compliant once the Design Coordinator determines that the requirements of these Guidelines have been met to the Design Coordinator's satisfaction, taking into consideration design merit. The Design Coordinator holds the final say for approval.

Design Approach

The vision for Denman Prospect is one where building forms and architectural styles reflect traditional aesthetics; an illustration of the essential qualities that define Canberra's most prominent suburbs.

Each individual dwelling design should contribute to the surrounding environment and to the estate in a positive way.

Owners are encouraged to construct innovative and appropriate designs that present a cohesive residential image for the entire estate and boast the values and principles embraced in Canberra's older suburbs.

A major objective of the Guidelines is to ensure that the creation of the desired built form and landscape will stimulate a sense of resident interaction and of neighbourhood pride.

The architectural vision seeks to create a development of contemporary Australian architecture and integrate built forms seamlessly across the development.

Façade Design

This will be achieved through clean and simple building forms and well-articulated façade elements combined with appropriate use of a neutral colour scheme and natural materials palette. The result is that each home establishes a high-quality, individual statement within a holistically designed series of streetscapes and neighbourhoods.

However, this needs to be balanced to ensure that the development is not made up of homes with design characteristics that are too similar. Providing variety in the facades along a street provides diversity and visual interest and ensures individual homes are differentiated.

Important to Note

For corner Blocks, where the Design Coordinator considers that the dwelling design does not appropriately or adequately address the street corner and both street frontages, additional treatments may be required to obtain approval.

Objectives

To ensure all dwellings are well-articulated and proportioned in order to reduce the overall mass of the building.

To ensure all corner lots which have any façade facing a street, park or other open space are designed such that all primary facades present well and are articulated when viewed from public areas.

To ensure that dwellings on corner lots address and 'wrap' the street corner through building articulation and design.

To avoid repetition of façade types within the streetscape (excludes terrace and row housing typologies).

To ensure a balance within the streetscape of variation of façade types and a level of consistency of dwelling articulation, materials and form.

Requirements

- All dwelling entries are to have an articulated and covered area of minimum 1.5m deep.
- Entry doors are to be simple and have clean lines.
- A verandah or entry pergola is desired to front the street.
- At least one living space is desirable to front the street.
- Sliding windows and/or doors are not permitted on any front elevation.
- Glazed balustrades are not permitted to front the street.
- Repetitive housing types will not be permitted; 1 repeat in 5 dwellings at a maximum with a minimum of 50% change.
- All external columns are to be of a substantial size, be well proportioned and be at least 200mm x 200mm; blade walls are acceptable and preferred.
- The maximum total width of garage door openings is the lesser of:
 - 6 metres; or
 - 50% of the frontage of the dwelling
- Garage doors are to be plain panel lift doors; roller doors are not permitted.
- Single tandem garages are not permitted.
- Extensive blank walls visible from the street are not permitted.
- Large areas of brick render are not permitted without relief by either articulation or alternate materials.
- Up lighting is permitted only where it is directional in function, onto the façade surface, within the property.

Dwelling Siting & Design

Dwellings must be responsive to the natural topography of the Block. Not only does this respect the natural fall of the land but it also encourages the opportunity for views, natural ventilation and reduces retaining wall heights. It also ensures that natural waterflow and runoff across Blocks is maintained and does not undermine neighbouring Blocks.

Any setback requirements outlined by the developer are identified in the Block Details Plans which form part of the Contract for Sale of the land.

Energy efficiency should also be considered when siting your home. The location and orientation of your dwelling, as well as location and arrangement of internal living spaces can influence solar access opportunities and cross ventilation in your home.

Important to Note

Topography of the Block should be considered first and foremost, with dwelling designs being considered to suit the natural fall and slope of each individual Block to minimise the need for retaining walls.

Dwellings which have been designed without any consideration of the Blocks natural fall and slope will not obtain Developer Approval and will need to be further considered and resubmitted.

Objectives

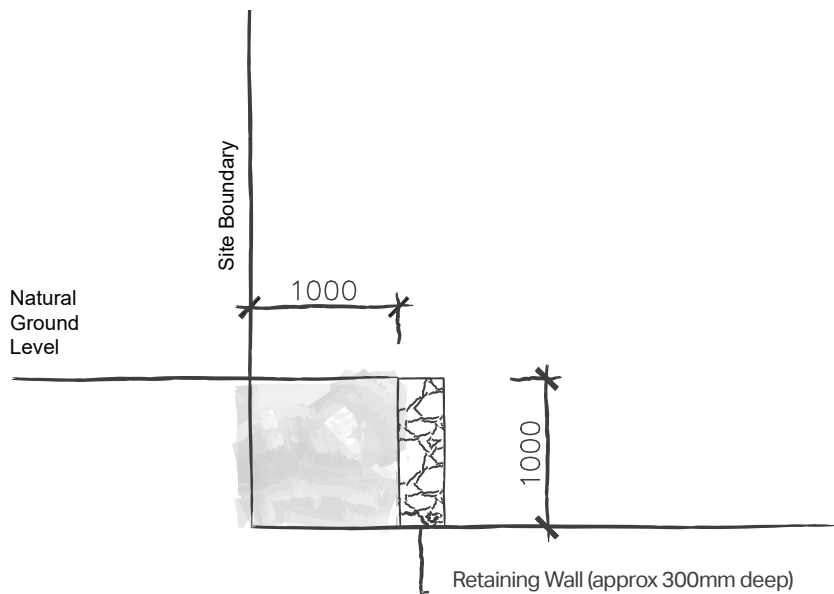

To create a home environment that promotes liveability, comfort and safety.

Primary living areas should have functional connection with the outdoor private open space areas such as courtyards and alfresco areas.

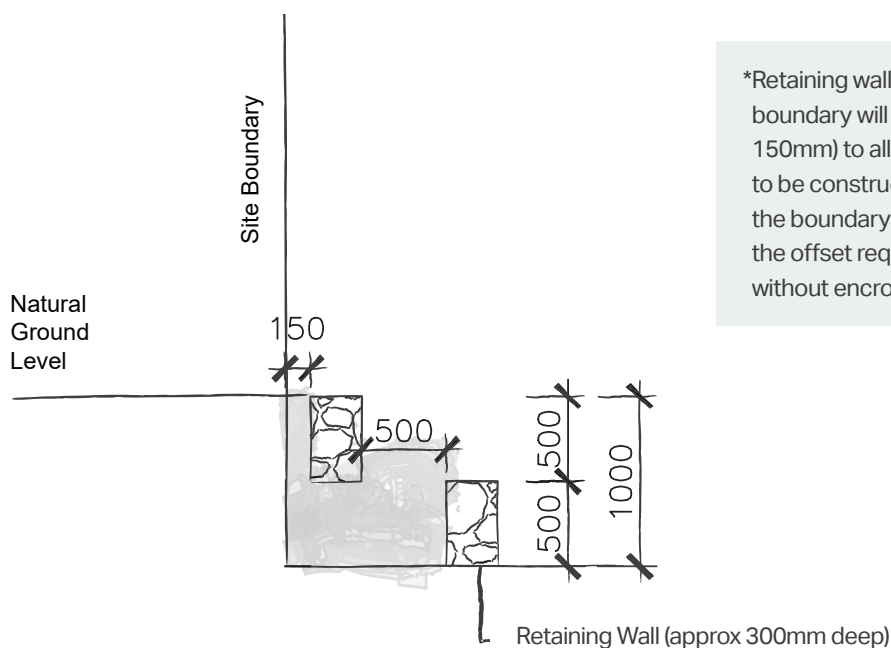

Inclusions for front balconies and entry porches create usable and interesting outdoor spaces that provide opportunities for residents to engage with passers-by.

Requirements

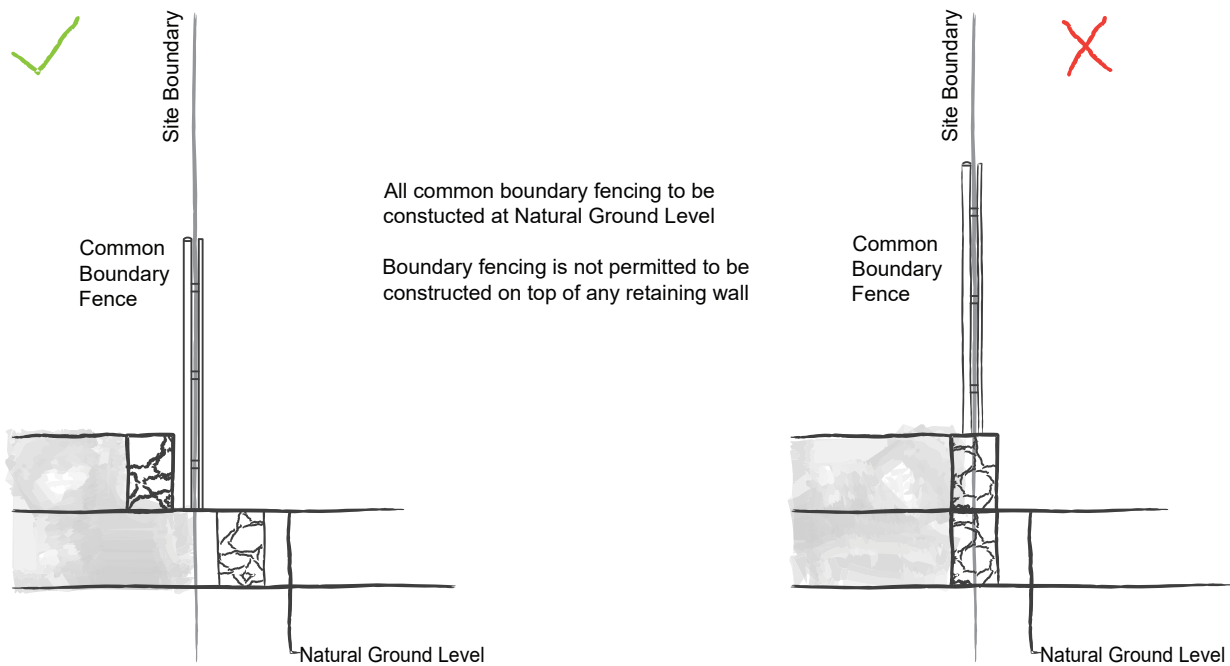

- Side setbacks on Blocks with a width of 17.6m or greater should be at least 1000mm on the side of the garage and no zero setback will be permitted.
- The principle private open space (PPOS) cannot be cut or filled more than 600mm from the floor level of the associated living space.
- The maximum overall retaining wall height is 1000mm. Retaining walls will be measured cumulatively at finished levels.

- The maximum height for a retaining wall on a boundary* is 500mm Any retaining wall over 500mm high must be offset from the boundary equal to its height. For example, a retaining wall 800mm high will need to be offset 800mm from the boundary.

- Common retaining walls between neighbours are not permitted; if retaining walls are required to address cut or fill they must be built within the boundaries of any individual Block.

- Flattening or amending natural ground level between two sites in order to avoid construction of previously approved retaining walls is not permitted; if a design requires the site to be cut or filled, approved plans need to be adhered to with each owner being responsible for retaining the cut or fill on their site rather than liaising with adjacent sites to alter the ground level.

- Minimum floor to ceiling height in any habitable room is 2550mm (unless previously agreed to by the Design Coordinator) however ceiling heights of 2700mm or greater are encouraged.

Dwelling Services & Ancillary Items

Each dwelling will require services and items that are essential for everyday living, but may not contribute to an appealing streetscape environment.

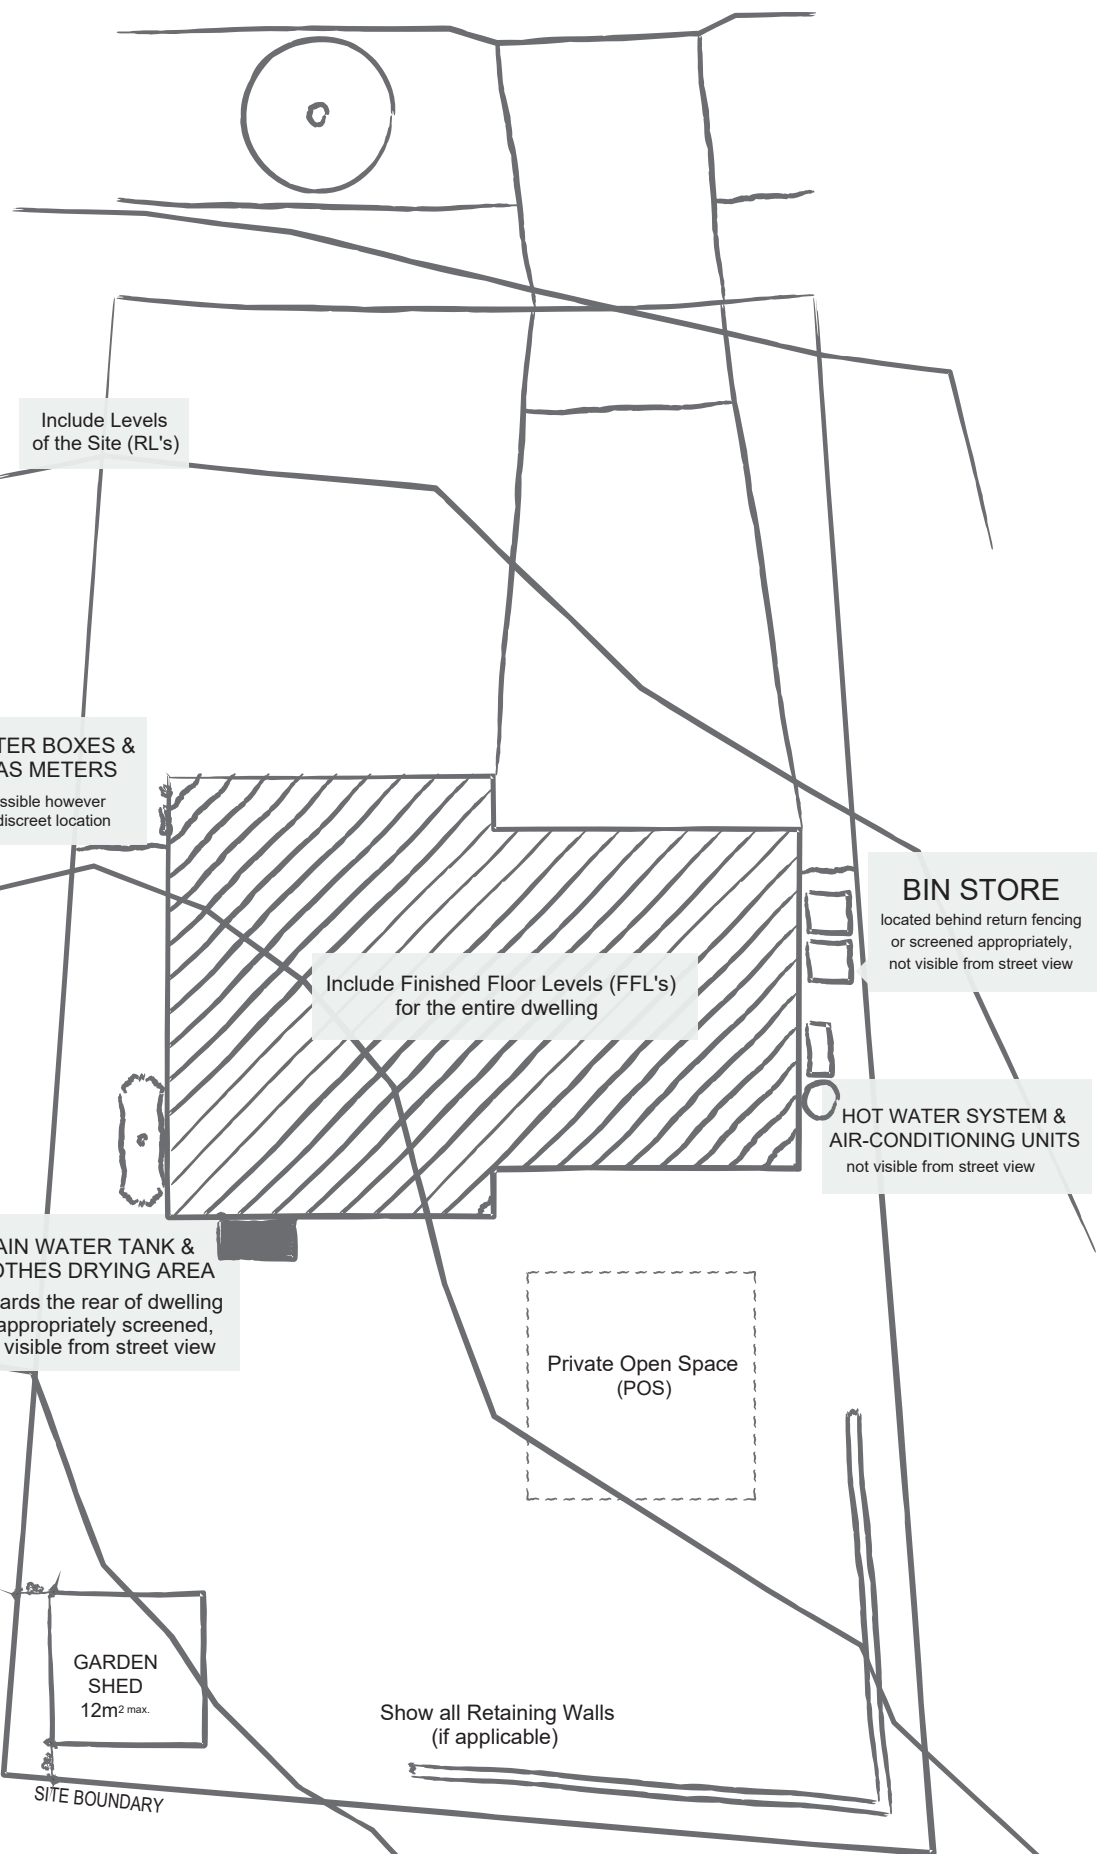

To create an attractive suburb we have identified some of these services and items to consider throughout the early stages of the design process so they can be appropriately located and hidden from street view.

Objectives

The streetscape and neighbourhood character of Denman Prospect should be protected by ensuring building and dwelling services and ancillary items are hidden from the public realm and view (where achievable). They should be located to the rear or side of dwellings.

Requirements

- No service rooms such as bathrooms or laundries are to be located on the front façade or visible from the street.
- Evaporative coolers are to be colour matched to the roof and not visible from the street.
- Rainwater tanks are to be colour matched to the home and not visible from the street; either located towards the rear of the dwelling or appropriately screened.
- Hot water system heaters are not to be visible from the street.
- None of the following services/items are to be visible from the street. They must be screened from public views and located to the rear of the home.
 - Air-conditioning units
 - Service lines
 - Clothes drying areas
 - Sheds
 - Satellite dishes
- No exposed ductwork or plumbing is permitted; downpipes are permitted however to be kept to a minimum on the front elevation and colour matched to the dwelling.
- Garden sheds cannot be greater than 12m² and must be at least 900mm from any boundary. Prior to any construction, detailed designs must be submitted to the Design Coordinator for endorsement.
- Storage areas for both waste and recycling bins must be suitably screened and shown on the plans.
- Meter boxes and gas meters are to be located in the least visually obtrusive location from public view.
- Security doors must be of a contemporary design, coloured to match window frames. Diagonal grid types of privacy mesh will not be permitted.

Include Levels of the Site (RL's)

METER BOXES & GAS METERS
accessible however in a discreet location

Include Finished Floor Levels (FFL's) for the entire dwelling

Show all Retaining Walls (if applicable)

Example of items to include in the Site Plan

Roofs & Solar Requirement

Roofs have a significant impact on the overall aesthetics of a building. They influence the character and amenity of a neighbourhood and can contribute to the passive performance of a building.

Contemporary roof lines and articulated roof shapes with hips/gables are preferable, as well as skillion roofs. Roofs with eaves of at least 600mm (from the frame) are required as this has practical implications; providing shade in the summer and protection in the winter.

The roof is to have clean lines and no decorative interpretations of traditional country homes or references.

Objectives

To ensure dwellings incorporate clean, simple and well-proportioned roof lines.

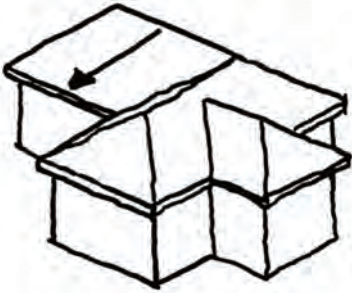

To encourage a range of contemporary roof lines within a streetscape that contribute positively to the character and amenity of the neighbourhood.

To ensure roofs have eaves and overhangs for shading of external walls for good passive solar performance.

Homes are to use a range of building forms including high roof pitches, large eaves, and simple, natural colour palettes.

Requirements

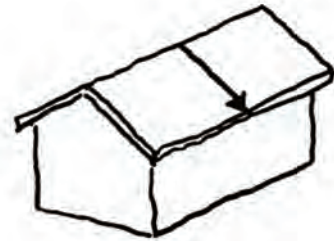

- Roof materials must be of one colour choice only.
- Consider the impact of mounting solar panels when designing roof form.
- All tiled roofs are to be of a flat profile concrete or terracotta tile.
- Roof pitches are as follows:

Hip roofs between 20-25 degrees

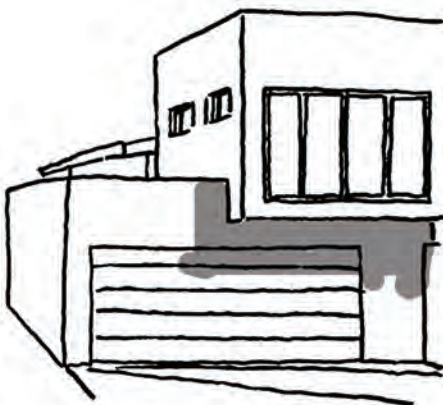

Gable roofs between 20-25 degrees

Skillion roof angles between 10-15 degrees

- No curved roofs will be permitted.
- Flat roof houses are generally not permitted. If the design is of a high quality, it may be permitted, however this is at the discretion of the Design Coordinator.
- Where parapets are incorporated they must fully conceal the roof from the public and return the entire length of the primary build zone, for upper and lower levels, on both sides of the dwelling.

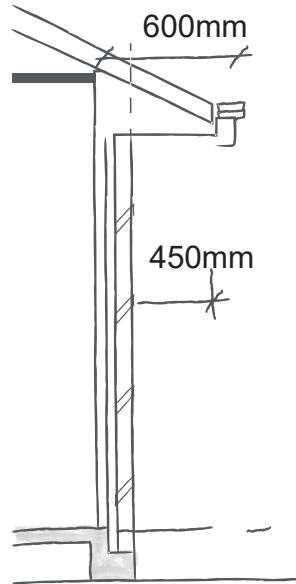

Side elevation

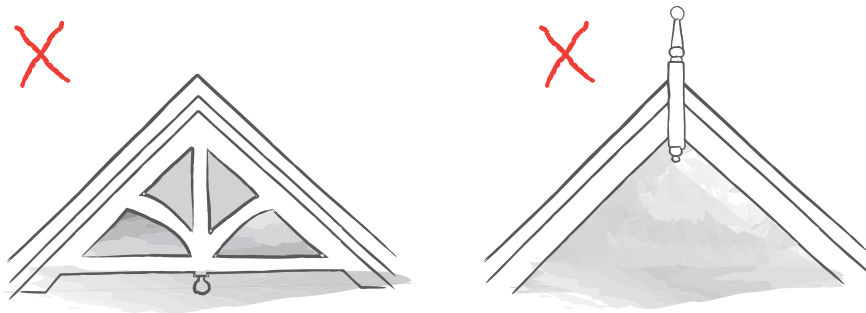

Front elevation

- No reflective roof materials will be permitted.
- No white or light coloured roof materials will be permitted.
- All gutters, down pipe treatments and rain head overflows are to be sympathetic to the style of the home, complementary to the colour and style of the dwelling and not decorative in profile.
- A minimum roof eave of 600mm in depth is required, however 900mm or wider eaves are strongly encouraged. For clarity, eaves are measured from the timber frame.

- Dormer windows and skylights are encouraged to increase natural light and ventilation.
- Top elements of the roof are to be a simple form; no finials, domes or decorative details are permitted.

- No stuck on or applied elements are permitted.
- All solar arrays are to be fitted to the rear of the dwelling and not visible from the street. Where Block orientation does not allow adequate solar aspect and following review and specific approval from the Design Coordinator, solar arrays may be fitted in view from the street however they must be fitted flat to the roof.
- Arrays mounted on sections of roof where the pitch is less than 15 degrees may require frames, at an additional cost to the owner.

External Colours & Finishes

Colours play an important role in influencing the look and feel of a streetscape. To provide a sense of harmony and consistency, a palette of complementary neutral colours and natural materials is suggested, that reflect the local landscape character of Denman Prospect.

Architectural interest is often achieved in dwellings by the use of combinations of single and double storey elements with a well-proportioned home being further enhanced by the appropriate choice of colours and finishes.

Important to Note

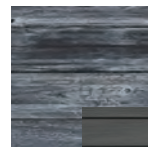

External colours and finishes will be assessed based on whether they are complementary to the overall architectural design and style of the dwelling, and will be assessed against surrounding dwellings that have already been submitted and granted developer approval.

Objectives

To incorporate within all new dwellings a selected palette of colours and finishes which complement the local streetscape and the neighbourhood character of Denman Prospect.

To maintain a consistently high standard of dwelling design through controlling the variety of colours and finishes that can be used on dwelling facades.

To establish a predominantly neutral colour scheme for streetscapes with light and dark contrast colours within facades to provide highlights to each home.

Requirements

- The base of the dwelling is to be solid, either masonry or rendered, with no lightweight materials to be used at the base of the dwelling.
- The primary choice of colours for your dwelling should be neutral, of natural colour tones, reflecting the environment.
- Darker colours should be used at the base of the dwelling with complementary balancing lighter colours on upper floors.
- Stronger, complementary accent colours are encouraged for key elements such as entry ways and on architectural elements.
- Cream on cream colour choices will not be permitted.
- All sides of the dwelling are to be treated with equal importance and be comprised of equal quality materials.
- Change of colour or material is not permitted at any external junction, or along a continuous plane without adequate articulation
- Where masonry treatments of brick are used, a single colour with a smooth face is permitted.
- The front elevation must comprise of a mix of materials to complement the natural environment of the Molonglo Valley.
- The use of one material for the entire home will not be permitted.
- Driveway materials are to be one of the following:
 - Exposed aggregate concrete
 - Oxide tinted
 - Asphalt with a paved edge
- Select stencilled concrete driveways are permitted however the design will need to be submitted and approved by the Design Coordinator prior to commencing works.
- Plain concrete or Pebblecrete driveways are not be permitted.
- Bright, fluorescent or metallic colours and materials are not permitted.
- Shiny or reflective materials that promote glare are not permitted.

Landscaping

Your front garden should provide you with a sense of ownership and a welcome arrival. Residential landscape treatments should be designed to achieve a contemporary character that complements the architecture of the built form, so that an integrated design outcome is achieved contributing to a visually consistent streetscape.

Landscape materials should be robust, easily maintained and present well to the street so that the overall streetscape character is enhanced.

A front garden enhances amenity and adds value to both the dwelling and the community. By establishing connections to the natural attributes of the site and siting the home appropriately, it has the potential to create a flawless connection from your front landscape to the streetscape.

All landscape plans will need to be submitted to the Design Coordinator for endorsement.

Objectives

To achieve a contemporary, natural form landscape outcome to the front of all homes.

To deliver functional and easily maintained front gardens that complement modern lifestyles.

To minimise the area of hardstand (e.g. concrete and paving) and maximise the amount of soft landscape (e.g. garden beds, turf and permeable surfaces).

To provide opportunities for the planting of shade trees and screening plants.

Example of items to include
in the Landscape Plan

Requirements

- All landscaped areas visible from the street shall be completed before the Compliance Bond is released and the Landscaping Contribution is paid.
- Verge Reinstatement
 - The verge must be re-grassed as part of the overall landscaping works; Installation of alternate treatments to the verge must be approved by TCCS and this approval provided to the Design Coordinator prior to commencement of works.
- Hard Landscaping
 - Landscape design should clearly define the homes entry.
 - The maximum width for pathways is 1000mm.
 - The use of gravel or crushed granite is restricted to pathways and no plain concrete is permitted.
 - All retaining walls are to be of stone pitch (mortared stone).
 - Exposed cuts over a maximum overall height of 1000mm will not be permitted.
 - Exposed levels of fill over a maximum overall height of 1000mm will not be permitted.
 - Any exposed cut greater than 500mm must be retained.
 - Any fill greater than 500mm must be retained.
 - Letterboxes must be made of materials that complement the dwelling and garden design. No metal, pre-fabricated or off-the-shelf letterboxes are permitted.
 - Planter box details incorporated into the front of the dwelling or as part of the letterbox are encouraged to help incorporate landscaping level changes, however they are not to be a dominating element. They must complement the style and choice of materials used within the dwelling's form and be constructed of either stone pitch or rendered masonry. Planter boxes are not to be incorporated in place of retaining walls.
 - Garden bed edging must not protrude more than 150mm from the surrounding ground level.
- Soft Landscaping
 - Two (2) trees are required to be planted within the front garden if the frontage of the Block is greater than 15m.
 - One (1) tree is required to be planted within the front garden if the frontage of the Block is less than 15m.
 - All required trees planted in the front garden are to be of a minimum height of 2.5m at the time of planting, with adequate deep root zone suitable to sustain the selected tree.
 - High quality trees must be preserved on Blocks for shade and amenity.
 - The use of any type of artificial grass or synthetic turf will not be permitted.
 - Brightly coloured/dyed wood mulches, or pebbles will not be permitted; river stones with an approximate diameter of 50mm will be considered acceptable for mulched areas.
 - Extensive areas of pebbles or gravel used as mulch is not permitted.

□ Common Boundary Fencing & Courtyard Walls

- Front fencing is not permitted.
- Common boundary fencing must be constructed at Natural Ground Level (that is, the level prior to any site cut being made and not on top of any retaining wall), material must be hardwood paling and max height is 1.8m.
- No Colourbond fencing is permitted.
- No solid masonry walls are permitted.
- Return fencing and side gates must be located at least 500mm behind the front building line on the Block's boundaries.
- Treated pine is not permitted for return fencing or side gates; any timber return fencing or side gates must be either stained or painted to match the dwelling.
- Courtyard walls are permitted on corner Blocks and must have a level of transparency with landscaping incorporated. Planter boxes will be considered at the discretion of the Design Coordinator.
- Courtyard walls are to be a mix of materials, masonry and either vertical or horizontal timber or powder coated slats.
- Treated pine is not permitted for courtyard wall slats; timber slats must be either stained or painted to match the dwelling.
- Courtyard walls must have a minimum 300mm solid base in the same material as the courtyard wall piers.
- No chain mesh materials are permitted.
- The use of opaque materials such as glass or Colourbond fencing is not permitted for courtyard walls.
- All courtyard wall piers must be located outside the easements.
- All details of courtyard wall design must be approved by the Design Coordinator.

Sustainability

The design and development of Denman Prospect has been undertaken with sustainability at its core. Central to the vision for Denman Prospect is the creation of a sustainable, resilient and enjoyable place for people to live, work and play.

Home owners should aim to apply sustainable design principles to the design and construction of their own homes with a focus on reducing energy, waste and water needs.

Objectives

To advocate and lead sustainable best building practices through optimising the use of building materials throughout the design of your home.

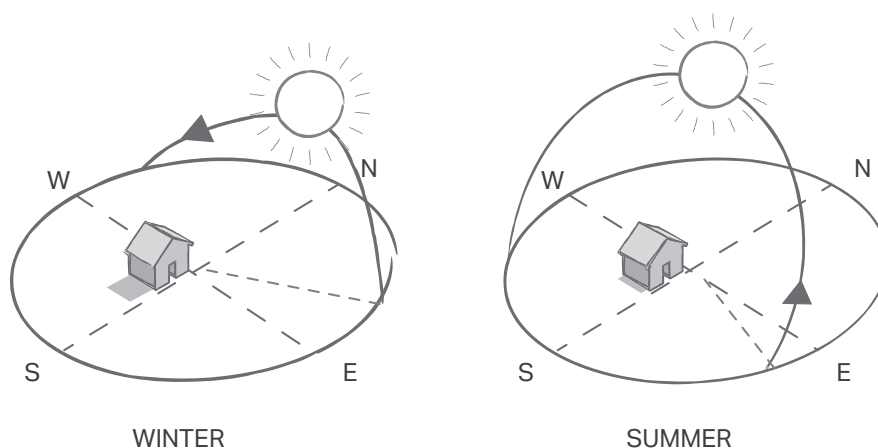

To protect and conserve water within the home and garden.

To increase energy efficient design through location and orientation of living spaces including the use of architectural forms such as eaves, window awnings and screens.

Requirements

- Dwellings need to comply with the ACT Environment WSUD requirements (at a minimum) inclusive of AAA rated taps, dual flush toilets and the use of rainwater tanks.
- Appliances must have a 5-star minimum energy performance standard rating under the Greenhouse and Energy Minimum Standards Act 2012 (Cth) (including determinations made under that Act).
- All dwellings are to have a mandatory 3kW solar array installed in accordance with these Guidelines and the Contract for Sale.
- All solar arrays are to be fitted flat to the roof however if there is poor solar orientation due to the Block orientation, following specific approval from the Design Coordinator, arrays on frames may be permitted.
- Solar Passive design principles must be considered with regards to solar access.
- Dwellings should be designed to maximise the winter morning sun and minimise the excessive summer afternoon sun in living areas and private open spaces.

- Consider the use of retractable shade devices, deciduous trees, angled louvres or tinted glass.
- The use of materials with low embodied energy is encouraged, for example recycled timber for flooring.
- The use of horizontal shading devices is strongly encouraged.
- Where possible, living spaces and ground floors are to be constructed with slab on ground noting some sloping Blocks may require a lighter weight construction (subfloor insulation is to be used on these Blocks)
- Cross ventilation must be considered in the internal dwelling layout, to promote breeze paths across the short axis of the dwelling.
- Maximise insulation to walls, ceilings and subfloor spaces

Other elements to consider

Regrading and Fill

You should make your own enquiries in relation to any regrading, filling or similar work performed at Denman Prospect. This work has been undertaken on Denman Prospect prior to or during Block servicing and may include, for example, filling former gullies and agricultural dams.

Block Maintenance

Before, during and after construction of your home, your Block is required to be kept clear of excessive weeds and rubbish and maintained to an acceptable standard.

Excavation material, rubbish or builders waste is to be stored in a covered bin and may not be deposited on adjoining properties, nature strips or in public areas during construction.

You are responsible for rubbish removal and for keeping your Block and adjoining street clean at all times during the construction of your home and landscaping.

Excavated soil that is surplus to your Block's needs must be removed and disposed of at a location approved by the Territory.

Adequate drainage of the Block must be provided for, to ensure there will not be any concentrated overland flow through the Block, particularly during construction.

Construction on the Block that alters access of stormwater to the existing stormwater system must not result in concentration of runoff onto adjacent Blocks.

Deliveries and Storage

All building materials, temporary toilets and building equipment must be stored within the property boundaries of your Block.

The nature strip, footpaths, roadways, neighbouring Blocks and public areas must be kept clear.

You will be responsible to rectify any damage caused by deliveries or by vehicles associated with the construction of your home to areas outside your Block.

Your builder and their subcontractors are not to park on the adjoining Blocks, surrounding public areas or on the nature strips.

Site Security

During periods in which your Block is unoccupied or building works are not in progress, it is advisable to ensure adequate fencing is erected to restrict public access.

In this regard, the minimum acceptable standard of fencing to the site is 1.8m high temporary construction fencing properly constructed, erected and clad internally with hessian or geotextile fabric.

All openings to the site are to be provided by gates, which are not at any time to swing out from the site or obstruct the footpath or roadway.

Street Tree and Verge Protection

Any damage to street trees or tree fencing during construction is the responsibility of the property owner to repair.

Any damage to the surrounding public areas including streets, street trees, footpaths, nature strips, driveway crossovers, services and adjoining land caused by the construction of your home is your responsibility.

Following completion of construction of your dwelling you can request removal of the fencing around your verge tree by sending an email with your request to design@capitalestate.com.au
