

# ABAX Group Sustainability Report 2024 – Lower emissions and impactful customer solutions

**ABAX Group has released its 2024 Sustainability Report, highlighting progress across its own operations while expanding the tools that help customers run greener and more responsible businesses.**

The report reflects ABAX's dual approach to sustainability – reducing its own environmental footprint and enabling thousands of companies across Europe to do the same.

In 2024, ABAX cut its total emissions by 17 % compared to 2023. A major driver was the transition to greener company vehicles, with 95 % of the fleet now electrified or hybrid. Flexible working models and smarter commuting choices also helped reduce travel-related emissions. Alongside this, the company expanded its circularity programme, refurbishing and recycling hardware to extend product lifecycles and reduce waste. Bio-based materials continue to be used in our devices, lowering reliance on fossil resources where we possibly can.

## **Making sustainability easier for customers**

ABAX solutions play an important role in helping customers reduce their environmental impact. As part of ongoing product improvements, ABAX has recently released an updated Environment Report feature in its platform, making it easier for customers to measure and report their emissions in line with sustainability requirements. The ABAX platform also supports smarter driving, predictive maintenance and usage-based insurance, helping businesses cut emissions, extend the life of vehicles and equipment, and operate more efficiently.

## **A stronger supply chain and governance framework**

The 2024 report also details progress in governance and accountability. ABAX strengthened supplier engagement in line with the Norwegian Transparency Act and recertified its ISO 14001, ISO 27001 and ISO 9001 standards, underlining ABAX's commitment to responsible, secure and high-quality operations.

*"We see sustainability as central to how ABAX develops and grows", said Emma Dyga, CEO of ABAX. "We are proud of the steps we have taken to reduce our own footprint – but just as important is the impact we create when customers can achieve their goals with our solutions."*

*"As a global company, we recognise that our responsibility extends across the value chain," added Janice Meakin, Group Procurement & Sustainability Manager. "Strengthening the supply chain is a key part of our sustainability work. By setting clear standards and adopting circular practices, we are reducing our impact while creating benefits for customers."*
