

RGA4H

FALL ARREST BLOCK WITH RECOVERY WINCH & STEADYING HANDLE - 15M

The RGA4H has the added benefit of an additional steadying handle. The RGA4H is a three way retrieval block fitted with an up/down winch mechanism and the standard fall arrest capability.

In the event of a fall, the operative can be winched up or down to safety. The RGA4H can raise the operative to a safe area if the area below is unsuitable. The man-riding winch function is for use only as a recovery provision - NOT for access / egress. This must be backed up with a separate fall arrest system, and a rescue/ recovery provision that is also separate to the winch. The RGA4H can provide both fall arrest back-up as well as recovery.

Accredited to: EN 360:2002

Line material: 5mm galvanised wire cable

Case material: Alloy

Connector: Double action high tensile steel swivel karabiner

Weight: 11.6kg

Max user weight: 140kg

Max force: <6kN

Handle turn ratio: 1:10

Handle force ratio: 1:10

Recovery winch & steadying handle

Build in fall indicator
