

Verizon Connect Integrated Video

A smart dashcam solution backed by AI

Transform fleet safety with the power of AI.

Our dashcams can automatically warn drivers of dangerous behaviors to help reduce accidents and promote safe driving.

Integrated Video provides the reliable tools needed to get better visibility into what's happening on the road and behind the wheel. With the help of artificial intelligence (AI), our dashcams automatically send audible in-cab alerts to drivers when they are distracted, falling asleep or driving unsafely. These real-time alerts help increase driver awareness immediately and reduce the likelihood of an accident.

Fleet managers can also promote a culture of safety and help reduce unsafe-driving behaviors by using video footage to determine whether coaching is needed. Coaching sessions can be tracked over time for individual drivers, highlighting areas of improvement to help reduce the reoccurrence of dangerous behaviors like hard braking, tailgating, phone usage and smoking.

Integrated Video also provides reliable video evidence alongside fleet data to help protect organizations against false accident claims, exonerate drivers and reduce unnecessary expenses. Managers can trust our smart dashcam solution to get the whole story when it's needed most.

Automatically alert drivers in real time when they're distracted, drowsy, following too close, or nearing a pedestrian or cyclist.

Facilitate coaching sessions with drivers to document and track improvements over time.

Help reduce risky driving behavior that can lead to an accident.

Use camera lens caps for privacy when video recordings are unwanted or not needed.

Set up notifications to alert appropriate team members.

Mitigate liability in the event of a false accident claim.

Understand the severity of an incident with AI-driven event classifications.

Here's how it works.

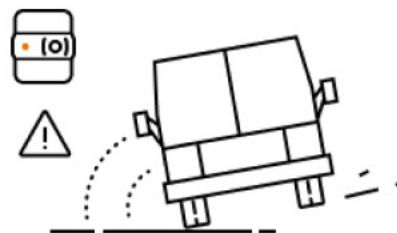

1.

Integrated Video cameras monitor the road and driver.

When a vehicle's ignition is turned on, the camera AI begins scanning video footage from the road-facing and driver-facing cameras. It can detect tailgating, a pedestrian or cyclist in the vehicle's path, and when a driver loses focus on the road by using a phone, falling asleep or smoking.

2.

A driver is distracted or being unsafe.

When the camera AI detects risky behavior, an in-cab audio alert will immediately tell the driver what they did, and video footage of the event is uploaded to the fleet platform. Other events that trigger video recordings include hard braking, rapid acceleration and harsh cornering.

3.

The cloud AI classifies the event.

The video is automatically analyzed, classified and prioritized by the cloud AI. Managers will see each video labeled as critical, major, moderate or minor. This data gives additional context to each video, helping managers decide which ones are the most important.

4.

A manager receives a notification.

Within minutes, managers can view footage on a mobile device or desktop computer, and determine whether coaching is required. All videos, along with their classifications, are available to view and download for 90 days, so managers have them when they need them for coaching or otherwise. This provides better visibility into what's happening with fleet vehicles and drivers, and allows for coaching sessions to be documented and monitored over time.

AI Dashcam details

Get the peace of mind you need with reliable hardware that can help you prioritize safety, reduce the likelihood of accidents and mitigate liability.

720p HD video

90-day cloud storage

140° view of the road

In-cab speaker with real-time alerts

130° view of the cab

Seamless integration with the fleet platform

Integrated Video easily integrates with Verizon Connect GPS tracking platforms, which are designed to help fleets improve operations.

Fleet visibility

See vehicles on a live map, replay routes driven, monitor specific areas with geofences and provide accurate ETAs.

Driver management

Track driving behaviors, like speeding and harsh braking, coach safe driving and monitor after-hours vehicle use.

Tracking vehicle metrics

Get detailed reports and dashboards, simplify routing and better plan vehicle downtime with automated maintenance alerts.

Reducing costs

Monitor expenses and find ways to cut costs associated with fuel, labor, maintenance and insurance.
